 acquisition of Spanish that provides a state of the art comprehensive overview of Spanish morphosyntactic development in
 monolingual and bilingual situations Its content is organized around key grammatical themes that form the empirical base of
 research in generative grammar nominal and verbal inflectional morphology subject and object pronouns complex structures
 involving movement topicalizations questions relative clauses and aspects of verb meaning that have consequences for syntax
 The book argues that Universal Grammar constrains all instances of language acquisition and that there is a fundamental
 continuity between monolingual bilingual child and adult early grammatical systems While stressing their similarities with
 respect to linguistic representations and processes the book also considers important differences between these three
 acquisition situations with respect to the outcome of acquisition It is also shown that many linguistic properties of Spanish
 are acquired earlier than in English and other languages This book is a must read for those interested in the acquisition of
