Recent Trends and Applications of Leguminous Microgreens as Functional Foods Piyush Mathur, Astha Gupta, 2025-01-17 Microgreens are the name given to the small, soft green parts of plants that develop from seedlings and do not bear any real leaves. These microgreens are known to have high nutritional content and are composed of phytoconstituents such as carotenoids, phenolics, and polyphenols, which allow for their usage in dietary programs. Legumes provide high nutritional value by enhancing dietary fibre, vitamins, and minerals, and are one of the most important sources of plant protein in the human diet. Leguminous microgreens can play a significant role in fulfilling the nutritional requirements of the world's population and will assist in completing the United Nations' global goal of zero hunger. Sustainable Development Goal 2. *Recent Trends and Applications of Leguminous Microgreens as Functional Foods* provides an in-depth look at the development of leguminous microgreens such as chickpea, lentils, beans, and peas. It covers potential germplasm containing high iron and zinc levels, biomass, and nutritive traits that can be used to produce a bio-fortified functional food with appropriate proportions of nutritive components. The book also discusses the increasing interest in production and consumption of microgreens due to their nutritional content, yield rate, rapid production time frame, and aroma qualities, among other factors. The book also covers management methods for production of biofortified food through conventional molecular and biotechnological approaches such as hydroponics and

aquaponics systems Additionally it contains assessments on safety during storage as well information on how to develop value added products that can supplement food needs requirements This book is a valuable tool for anyone looking to gain a comprehensive understanding of this growing sector within agriculture and will provide readers with all they need to know about developing leguminous microgreens for enriched functional foods *Head Start Nutrition Education Curriculum*

development which can potentially protect food pathogens from sanitizers and result in the spread of foodborne illness

Biofilms in the Food Environment is designed to provide researchers in academia federal research labs and industry with an understanding of the impact control and hurdles of biofilms in the food environment Key to biofilm control is an understanding of its development The goal of this 2nd edition is to expand and complement the topics presented in the original book Readers will find The first comprehensive review of biofilm development by *Campylobacter jejuni* An up date on the resistance of *Listeria monocytogenes* to sanitizing agents which continues to be a major concern to the food industry An account of biofilms associated with various food groups such as dairy meat vegetables and fruit is of global concern A description of two novel methods to control biofilms in the food environment bio nanoparticle technology and bacteriophage
