Applications of Declarative Programming and Knowledge Management Dietmar Seipel, Michael Hanus, Ulrich Geske, Oskar Bartenstein, 2005-04-01. This volume contains a selection of papers presented at the 15th International Conference on Applications of Declarative Programming and Knowledge Management INAP 2004 and the 18th Workshop on Logic Programming WLP 2004 which were held jointly in Potsdam, Germany from March 4th to 6th 2004. Declarative programming is an advanced paradigm for the modeling and solving of complex problems. This specification method has become more and more attractive in recent years for example in the domains of databases for the processing of natural language for the modeling and processing of combinatorial problems and for establishing knowledge-based systems for the Web. The INAP conferences provide a forum for intensive discussions of applications of important technologies around logic programming, constraint problem solving and closely related advanced software. They comprehensively cover the impact of programmable logic solvers in the Internet society, its underlying technologies and leading edge applications in industry, commerce, government and social services. The Workshops on Logic Programming are the annual meeting of the Society for Logic Programming GLP e V. They bring together researchers interested in logic programming, constraint programming and related areas like databases and artificial intelligence. Previous workshops have been held in Germany, Austria and Switzerland. The topics of these selected papers of this year's joint conference concentrate on three currently important fields: knowledge management and decision support, constraint programming and constraint solving, and declarative programming and Web-based systems.

Handbook of Technology-based Training Brian Tucker, 1997. Technology-based training offers a flexible, cost-effective way of meeting the increasing need for people to reskill. This work provides an accessible guide to the potential benefits and pitfalls of this form of training. It describes the evolution of technology-based training, the various technologies and their uses, the benefits of using such flexible learning and how to use the technology, how to implement TBT in an organization and where the future might lie. Brian Tucker also deals with the choosing and evaluating generic training and the issues of bespoke training, either produced in-house or outsourced. The handbook is not highly technical and it uses examples to examine how nine leading organizations have managed the various issues and how they have benefited from this approach to training. Structured in two parts, the first provides an overview of the subject whilst the second consists of a directory of over 700 generic TBT coursework titles indexed by subject, title, medium and producer.
