OVERVIEW OF SQL

- SQL (Structured Query Language): A standard language for accessing data stored in databases
- While it is "standardized," there are many variations, each with its own proprietary extensions and features
- The latest standard is ANSI SQL-99 (which was proceded by SQL-92).
- This guide will discuss the ANSI SQL-99 standard and variations implemented in Microsoft SQL.
 Server* 2000 (other versions of Microsoft SQL Server* and other discussions version are similar as the content discussed in this guide in introductive; refer to the product's documentation for any differences;

COVERED IN THIS GUIDE

- . This guide assumes understanding of basic database concepts
- IBM started out SQL as a SEQUEL (Structured English QUEry Language) in the 1970s.
- It was a standard language to query databases
- This has changed very little in its scope and purpose over the years
- The American National Stoodards Institute (ANSI) designed a standard that allowed database vendors better interoperability between versions and mode it easier to learn and migrate between database vendors
- Their first standard was released in 1986, and was updated in 1989, 1992, and 1989
- One of SQL-92's big changes was the introduction of conformance levels
- They were, from simplest to the most complete, implementations of the standard: Entry, Intermediate, and Full.
- Each level encompassed all of the preceding levels and added new capabilities
- To claim ANSI compliance, the product had to at least support the Entry level
- SQL-99 added, among other things, object-oriented datatypes
 - It also changed Entry level conformance to Cove SQL:1999
 - Also changed the other 2 levels to 9 sets of additional features
 - Any database that exects the core spec and at least 1 additional feature set is Enhanced SQL 1999 compliant

CONVENTIONS USED

To make system simples to write, the following notations are used in system descriptions:

Notation	Example	Meaning
ALL CAPE	SELECT	A SQL keyword; type this test exactly as shown
BOLD ALL CAPE	SELECT	Statements and options that are part of the ANSI standard
Insilie Sent	Database name	Replace the italic text with the text described in italics; es. Datahour name with MyDB
0	GROWN BY Flick! Name	Optional syntax; the command will work without specifying this parameter; do not type []
pOpetion L #II	CROSS BY Field Name I, Field Name I	Multiple parameters may be specified, separated by communic in some cases multiple optional parameters may be specified, as noted in the use of square brackets, do not type []
(C)publican (L)—m(0)	MOT MULL CHECK (Natury < 100)	Multiple parameters may be specified, separated by species; in some cases multiple optional parameters may be specified, as noted in the two of square brackets; do not type []; in this example, the field most not by blank and the value < 100
п	PEIGH Avins	Parameters (or I of them if multiple options are given) must be specified, in this example, the FROM classe must be specified in a SELECT statement.
12	NULL! NOT NULL	Only 1 of the options listed may be chosen; in this case NULL or NOT NULL.
0.0	(13):	Entered the desired number in parenthesis
Expression	Field Name or SIN (Field Name)	A field, variable, or combination of fields and/or variables separated by operators or a function involving fields and/or variables
Therete	«Edenmer	Definition of encumerar referenced absorbers

Note that not all statements or all possible options for every statement will be covered in this guide
