1. The first step is to identify the problem. In this case, the problem is that the system is not working properly.

2. The next step is to gather information about the problem. This includes checking the logs, looking at the error messages, and talking to the users who are reporting the problem.

3. Once you have gathered information, you need to analyze it. This means looking for patterns, identifying the root cause of the problem, and determining what needs to be done to fix it.

4. The final step is to implement the solution. This involves making changes to the system, testing the changes, and monitoring the system to make sure the problem is fixed.
