In this book, you will combine multiple disciplines: electronics, programming, and engineering to successfully build a multifunctional robot. You'll discover how to construct a motorized base, set up an Arduino to function as the brain, use whisker switches to detect physical contact, avoid obstacles with ultrasonic sensors, teach your robot to judge distances, use a universal remote to control your robot, install and program a servo motor, respond to input with LEDs, buzzers, and tones, mount line-following sensors under your robot. And more. Everything is explained with lots and lots of full-color line drawings. No prior experience is necessary. You'll have fun while you learn a ton.
