- (1.2) These two measures provide additional useful information and complementary measures to those of the two previous conditional steps. The gradient of these two measures increases with α (the number of the semi-conditional step gradient). The two conditional step gradient was obtained using $\alpha = 0.001$ as default. The two measures provide measures of the $\alpha = 0.001$ stepwise value for the ability of the network to approximate under the two conditions.
