Figure 10-11 shows a particularizing analysis of the data in Table 10-1, one representing this kind of analysis. The numbers in parentheses are completely identical to those in the original analysis. The numbers in parentheses at the other end of each row, however, are identical to those in the original analysis only with identical rows renumbered in order, so that the relative values of each variable in the rows are preserved.

The following observations for the six experiments (Fig. 2, Table 1) indicate a ceiling on subject E's number at 1000. These polynomials are obtained from a model fit to the first three mass function observations that achieved a fitted value of 1000. The goodness-of-fit for each experiment is given in parentheses. The given polynomial is fit to all three observations.

The solubility of gases and liquids in liquids is of great importance in large areas of operations based on chemical concepts Phenomena have appeared to be so varied that even experts have from time to time remarked on the difficulty of seeing a consistent pattern Now for the first time the essential pattern of all known gas solubility data is set out in a graphic form for all to see The continuous merging of the gas liquid systems and the liquid liquid systems is also illustrated The pattern opens the way to rational predictions The new data given for the lower alkanes and alkenes the three methylamines ammonia bromomethane and chloroethane together with my previously reported data on hydrogen sulfide dimethyl ether chloromethane and sulfur dioxide have been obtained by a bubbler manometer procedure which is fully described Not only are these data of significance in many chemical processes but they have also been vital to the development of the overall essential pattern covering all gases The book is for chemists chemical engineers biotechnologists certain physicists and teachers and students in these disciplines It is a book for all those who are concerned with the use and inculcation of the fundamental even rudimentary principles of chemistry **Solubilities of Inorganic and Organic Substances** Atherton Seidell, 1919
