The Publishers' Trade List Annual ,1985 *Numerical Calculations for Process Engineering Using Excel VBA* Chi M. Phan,2023-12-01 Numerical Calculations for Process Engineering Using Excel VBA provides numerical treatment of process engineering problems with VBA programming and Excel spreadsheets The problems are solving material and energy balances optimising reactors and modelling multiple factor processes The book includes both basic and advanced codes for numerical calculations The basic methods are presented in different variations tailored to particular applications Some

macros are combined with each other to solve engineering problems Examples include combining the bisection method and binary search to optimise an implicit correlation combining golden section search with Euler s method to optimise a reactor and combining bisection code and Euler s method to solve steady state heat distribution The text also includes nonconventional examples such as harmony search and network analysis The examples include solutions to common engineering problems such as adiabatic flame temperature plug flow reactor conversion batch reactor heat diffusion and pinch analysis of heat exchanger networks The VBA code is presented with mathematical equations and flowcharts enabling the audience to adopt the solutions to different problems The book contains many demonstrations of numerical techniques to guide users It also includes useful summaries of VBA commands functions and Excel predefined functions accessible in VBA While the book is developed primarily for undergraduate students the book is a helpful resource for postgraduate students and engineers

Magma to Microbe Robert P. Lowell, Jeffrey S. Seewald, Anna Metaxas, Michael R. Perfit, 2013-04-30
Magma to Microbe Published by the American Geophysical Union as part of the Geophysical Monograph Series Volume 178
Hydrothermal systems at oceanic spreading centers reflect the complex interactions among transport cooling and crystallization of magma fluid circulation in the crust tectonic processes water rock interaction and the utilization of hydrothermal fluids as a metabolic energy source by microbial and macro biological ecosystems The development of mathematical and numerical models that address these complex linkages is a fundamental part the RIDGE 2000 program that attempts to quantify and model the transfer of heat and chemicals from mantle to microbes at oceanic ridges This volume presents the first state of the art picture of model development in this context The most outstanding feature of this volume is its emphasis on mathematical and numerical modeling of a broad array of hydrothermal processes associated with oceanic spreading centers By examining the state of model development in one volume both cross fertilization of ideas and integration across the disparate disciplines that study seafloor hydrothermal systems is facilitated Students and scientists with an interest in oceanic spreading centers in general and more specifically in ridge hydrothermal processes will find this volume to be an up to date and indispensable resource
