

These relevant factors are important issues that you should be aware of. As your text mentioned, newer is not always better.

IV. The Evolution of Information Systems Models

Over time, accounting systems have changed and grown both in response to limitations and the availability of new technologies. The evolution is often slow, and various generations co-exist. This text considers five *information system models*. These are introduced here and further developed later in the text.

A. The Manual Process Model

As the name implies, this is the old manual approach to recording accounting transactions. Because it is easier to visualize the flow of accounting information in a manual system, it is very beneficial to study such systems, although few exist in practice. The discussion of parts of the accounting system that will occur in Chapters 4 through 8 will always begin with presentation of what happens in a manual system. You will find it easier to follow the discussion of automated systems after "seeing" the manual processes.

B. The Flat-File Model

When accounting applications were first computerized, different applications were developed separately with files created for individual applications – even if other parts of the organization had use for the same information. The department that developed the application **owned** the data and typically did not **share** it with other units. **Fig. 1-12, on page 30**, shows the situation that could occur if three user groups collect and use customer sales information. Note carefully the problems that result in this situation because of the **data redundancy** that results: *data storage issues, data updating issues, currency of information and task-data dependency*.

You will often hear such established systems referred to as **legacy systems**. One of the key concerns relates to the difficulty in integrating data in flat-file systems.

C. The Database Model

Many of the weaknesses of a flat-file system are overcome by a **database model**. As shown in **Fig. 1-13, on page 32**, this model centralized an organization's data so that it can be shared by other users. Because all data should not be accessible by
