

INTRODUCTION

The speed with which telematics has evolved since its beginnings in the 1980s is nothing short of astonishing. Today we perhaps take for granted that we can send each other our locations with a simple cell phone message or that an electronic device guides us from door to door if we require the road. In the modern age where you can check online prices of the nearest gas stations using your car's very own built-in browser, can you imagine that even as recently as fifteen years ago it was commonplace to use paper maps?

What began with the development of a basic global positioning system has evolved into a broad, sophisticated spectrum covering numerous interconnected fields, from road safety and transportation to telecommunications and more.

Telematics has without doubt become an indispensable element in our everyday lives. In this brief guide to the history of telematics, you will learn about how it came into existence, its evolution since the 1980s to the present day, and what we might expect in coming years.

James Long, 1848 Knowledge Engineering: Practice and Patterns Philipp Cimiano, H. Sofia Pinto, 2010-11-18 Knowledge Management and Knowledge Engineering is a fascinating eld of re 1 search these days In the beginning of EKAW the modeling and acquisition of knowledge was the privilege of or rather a burden for a few knowledge engineers familiar with knowledge engineering paradigms and knowledge representation formalisms While the aim has always been to model knowledge declaratively and allow for reusability the knowledge

models produced in these early days were typically used in single and very specific applications and rarely changed. Moreover, these models were typically rather complex and they could be understood only by a few expert knowledge engineers. This situation has changed radically in the last few years as clearly indicated by the following trends. The creation of even formal knowledge is now becoming more and more collaborative. Collaborative ontology engineering tools and social software platforms show the potential to leverage the wisdom of the crowds or at least of the many to lead to broader consensus and thus produce shared models which qualify better for reuse. A trend can also be observed towards developing and publishing small but high impact vocabularies e.g. FOAF, Dublin Core, Good Relations rather than complex and large knowledge models.

Tomas, the boy who grew dragons, is officially the Grand High Dragon Master. He's lived with his dragons Flicker and Zing and grown dozens more. He's an expert at caring for the dragonfruit tree. He knows all the tricks for training dragons, nurturing dragonfruit seedlings and defusing dragon poo. So he has this brilliant idea: He and his friends have got to get all their dragon expertise down in one easy to read place for them and anyone else who might find themselves growing dragons. The only problem is Tomas's friends: Ted, Kat, Kai, Liam and Aura are currently scattered all around the world from Suffolk to Mexico to China. Perhaps though, if they can get their heads together, they can figure this all out together and create the most brilliant ULTIMATE GUIDE ever together. Of course, what they don't realise is they still have a lot to learn about dragons.
