The Journal of Immunology, 2008-07 **Academic Scientists at Work** Jeremy Boss, Susan Eckert, 2006-10-16 A guide for scientists on the journey from the end of a postdoctoral career to the point of promotion to Associate Professor this 2nd edition focuses on three aspects of the academic setting Scholarship Teaching and Service Valuable advice is provided on such topics as choosing and landing an academic job setting up and managing the lab obtaining funds organizing writing and publishing your work teaching and mentoring and the promotion and tenure process *List of Journals Indexed in Index Medicus* National Library of Medicine (U.S.), 1996 Issues for 1977 1979 include also Special List journals being indexed in cooperation with other institutions Citations from these journals appear in other MEDLARS bibliographies and in MEDLING but not in Index medicus *Deciphering the Regulatory Role of Transcription Factors in Cancer Immune Infiltration* Qian Yang, Yujia Lan, Jin-Fen Xiao, 2025-02-18 Transcription factors TF are proteins that bind to specific DNA sequences and regulate the transcription of target genes They control various cellular processes including cell proliferation differentiation and immune responses In cancer dysregulated TF activity can profoundly impact the tumor microenvironment influencing immune cell recruitment activation and function By modulating the expression of immune related genes TFs can either promote or suppress immune infiltration in the tumor shaping the anti tumor immune response Cancer immune infiltration the process by which immune cells infiltrate tumor tissues is a critical aspect of the tumor microenvironment and plays a pivotal role in cancer progression and response to therapy Understanding the regulatory role of TFs in cancer immune infiltration holds significant promise for the development of novel therapeutic strategies and biomarkers for cancer treatment

Interdependencies and Interfaces in Bone Regeneration - The Immune System at its Core Katharina Schmidt-Bleek, Bettina Willie, Thaqif El Khassawna, Kurt David Hankenson, 2024-03-19 **COVID-19: Integrating Artificial Intelligence, Data Science, Mathematics, Medicine and Public Health, Epidemiology, Neuroscience, Neurorobotics, and Biomedical Science in Pandemic Management, volume II** Atefeh Abedini, Reza Lashgari, 2024-02-29 New insights of immune cells in cardiovascular and metabolic disorders Yingmei Feng, Xiangwei Xiao, Catherine M. Verfaillie, 2023-10-26 **Neutrophil Death Regulation in Critical Illness** Jia-feng Wang, John Marshall, Bingwei Sun, 2023-04-14 **Endocrinology of Obesity, Aging and Stress** Yuko Maejima, Kenju Shimomura, Heidi de Wet, 2025-04-09 The prevalence of obesity is increasing on a global scale In addition we are facing the arrival of super aging society Obesity s effects on cognitive decline mobility hypertension and stress are similar to symptoms seen in aging Both obesity and aging lead to serious health problems and increase the risk of developing multiple diseases and even death Aging is associated with an increase in abdominal fat a major contributor to insulin resistance and metabolic syndrome Obesity and aging share a similar spectrum of phenotypes such as compromised genomic integrity impaired mitochondrial function accumulation of intracellular macromolecules weakened immunity shifts in tissue and body composition and

enhanced systemic inflammation Overall the current search results suggest that there is a complex relationship between obesity aging and stress Both obesity and aging are associated with inflammation and oxidative stress which are also associated with stress In order to understand the cross talk among obesity aging and stress from an endocrinological point of view we propose the topic entitled Endocrinology of obesity aging and stress

Assessment and Management of Adverse Drug Reactions in Oncology Kevin Sheng-Kai Ma, Chun-Bing Chen, 2023-08-02 *Exploring the Intersection of Cancer Metabolism, Metastasis and Immunotherapy* Lei Huang , Pengpeng Liu, 2025-11-06 Cancer metabolism is a critical area of research central to understanding how malignant tumors manipulate metabolic pathways to support their growth and survival These alterations not only fuel rapid tumor expansion but also reshape the tumor microenvironment This environment in turn impacts immune cell function often creating an immunosuppressive habitat that allows cancer cells to evade the immune response Additionally the role of metabolic reprogramming in promoting cancer metastasis the spread of cancer cells to new areas complicates therapeutic approaches making it a critical avenue for investigation This Research Topic aims to elucidate the complex interactions between cancer cell metabolism and immunotherapy effectiveness By diving into the metabolic adaptations of cancer cells this study seeks to uncover how these changes impair immune cell function and contribute to the cancer's ability to metastasize Understanding these mechanisms could pave the way for novel therapeutic strategies that enhance immunotherapy responses and curb metastatic progression ultimately aiming to improve survival rates in cancer patients To advance our understanding in this field the scope of this research topic will focus on the metabolic underpinnings that facilitate cancer's evasion of immune surveillance and its ability to metastasize We invite submissions that explore but are not limited to the following themes The influence of cancer metabolism on the behavior and efficacy of immune cells Metabolic checkpoints that could serve as new targets for immunotherapy Metabolic reprogramming of immune cells like T cells and macrophages within the tumor microenvironment Innovative combination therapies that integrate metabolic and immune modulating approaches Identification of biomarkers that connect metabolic and immune pathways to metastatic behavior aiding in the development of personalized cancer treatments

Experiments in International Benchmarking of US Research Fields Institute of Medicine, National Academy of Engineering, National Academy of Sciences, Committee on Science, Engineering, and Public Policy, 2000-03-28 How can the federal government gauge the overall health of scientific research as a whole and in its parts and determine whether national funding adequately supports national research objectives It is feasible to monitor US performance with field by field peer assessments This might be done through the establishment of independent panels consisting of researchers who work in a field individuals who work in closely related fields and research users who follow the field closely Some of these individuals should be outstanding foreign scientists in the field being examined This technique of comparative international assessments is also known as international benchmarking Experiments in International Benchmarking of U S Research Fields evaluates the feasibility and utility of the

benchmarking technique In order to do this the report internationally benchmarks three fields mathematics immunology and materials science and engineering then summarizes the results of these experiments *Trends in Neuroimmunology: cross-talk between brain-resident and peripheral immune cells in both health and disease* Estela Maris Muñoz,Rajnikant Mishra ,Veronica Martinez Cerdeño,Janina Edith Borgonovo,Shashank Kumar Maurya ,Suryanarayan Biswal,2024-06-26 The functional anatomy of organisms is maintained by the coordination of different systems that often rely on particular interactions between specialized cells and between macromolecules The immune system works with the circulatory and the lymphatic systems to protect most of the organs However some organs are considered immune privileged due to the presence of highly selective and regulated barriers such as the blood brain barrier BBB within the brain The BBB controls periphery brain molecule exchange and prevents immune effector cells from entering the homeostatic brain BBB associated elements such as endothelial cells pericytes astrocytes and microglia potentially can function as antigen presenting cells APC Pathological scenarios that induce dysfunction of the BBB and its associated cells may lead to the infiltration of lymphocytes crossing over from the blood to brain Similarly traumas can also enable B and T lymphocytes to pass bidirectionally between the CNS and the periphery via the meningeal lymphatic vessels which drain into the cervical lymph nodes Research in animals and in humans has revealed that B and T cells are involved in the progression of neurological diseases It has been showed that under particular conditions T cells establish themselves and become resident in the brain T RM cells from where they can either exert beneficial or detrimental effects on brain function Amazing efforts have been made to further comprehend interactions between brain specific cells and peripheral immune cells and especially their roles and impact on the onset progression and eventual resolution of diverse brain pathologies **Enhancing Philanthropy's Support of Biomedical Scientists** National Research Council,Policy and Global Affairs,Board on Higher Education and Workforce,Committee for the Evaluation of the Lucille P. Markey Charitable Trust Programs in Biomedical Sciences,2006-06-05 During an interval of 15 years the Lucille P Markey Charitable Trust spent over 500 million on four programs in the basic biomedical sciences that support the education and research of graduate students postdoctoral fellows junior faculty and senior researchers The Markey Trust asked the NRC to evaluate these programs with two questions in mind Were these funds well spent and What can others in the biomedical and philanthropic communities learn from the programs of the Markey Trust both as an approach to funding biomedical research and as a model of philanthropy One of five resulting reports this volume contains the proceedings of a workshop held in June 2005 to investigate methods used to evaluate funding of the biomedical scientists by philanthropic and public funders In addition to the Markey Trust representatives from the Howard Hughes Medical Institute the American Heart Association the Doris Duke Charitable Foundation the National Institutes of Health and six other funders of biomedical scientists presented information on evaluation methodologies and outcomes **Enhancing Philanthropy's Support of Biomedical Scientists** Mr. Rohit

Manglik,2024-03-11 EduGorilla Publication is a trusted name in the education sector committed to empowering learners with high quality study materials and resources Specializing in competitive exams and academic support EduGorilla provides comprehensive and well structured content tailored to meet the needs of students across various streams and levels The Molecular Basis of Programmed Cell Death and Neuroinflammation in Neurodegenerative Diseases Ramkumar Mathur,Chetna Soni,Antariksh Tyagi,Xusheng Wang,2024-01-25 Age related neurodegenerative diseases such as Alzheimer s disease and Parkinson s disease are characterized by progressive neuroinflammation as well as neuronal degeneration Apoptosis necrosis and autophagy are all types of programmed cell death that are morphologically distinct from one another Over the last decade extensive research has been conducted on necroptosis resulting in a better understanding of its molecular underpinnings and role in neurodegenerative diseases A later study investigates the processes of apoptosis and necroptosis as well as their roles in the activation of inflammatory immune responses Although there is a distinct mode of cell death with distinct morphological characteristics its identification and implications in neurological diseases are still unknown Interestingly emerging evidence has established a direct link between epigenetic and posttranslational modifications and neurodegenerative disease Using epigenetic and proteomic methods researchers uncovered genes and proteins that may play a function in the area of neuroinflammation a role that has hitherto been overlooked New pharmacological targets and therapeutic options for neurodegenerative diseases are being investigated in order to gain a better understanding of the disease s origins and progression by using neuronal death and neuroinflammation models that are associated with epigenetic changes Cancer Immunotherapy Principles and Practice, Second Edition Lisa H. Butterfield,Howard L. Kaufman,Francesco M. Marincola,2021-08-25 Thoroughly updated to reflect major advances in the field of immuno oncology this second edition of Cancer Immunotherapy Principles and Practice from the Society for Immunotherapy of Cancer SITC remains the definitive resource for information on tumor immunology and cancer immunotherapy treatments An essential reference for both novice and experienced cancer researchers oncologists and related practitioners alike the book not only guides readers through the fundamental scientific principles of the field all the way to translational and practical clinical applications for treating and managing oncologic disease but also provides a comprehensive understanding of the regulatory processes that support the safe and effective delivery of immunotherapy to patients with cancer The expanded and updated second edition now spans 68 chapters including 12 new chapters covering major topics and innovations that have shaped the rapid development of immunotherapy and its ascension into the standard of care as first line treatment for a growing number of disease settings New to this edition are chapters with deeper insight into our understanding of cancer genomics and determinants of response immunogenic cell death cancer and stromal cell intrinsic pathways of immune resistance cancer immune exclusion adoptive cell therapy metabolomics tumor mutation burden immunotherapy in combination with radiation therapy synthetic biology and more Complete with detailed illustrations tables and key points for targeted reference Cancer

Immunotherapy Principles and Practice Second Edition is the most comprehensive and authoritative resource for scientists and clinicians looking to expand their knowledge base of this dynamic field Key Features Offers key insights and perspectives on cancer immunology and immunotherapy treatments from renowned experts in the field Covers the basic principles and science behind cancer immunotherapy and tumor immunology Includes treatment strategies for a vast array of available immunotherapy classes and agents such as cytokine therapies oncolytic viruses cancer vaccines CAR T therapies and combination immunotherapies Provides essential information on FDA approved immunotherapies including clinical management and outcome data related to response rates risks and toxicities Discusses special considerations for immunotherapy in the context of specific disease settings including skin cancers genitourinary cancers gastrointestinal cancers hepatocellular carcinomas gynecologic malignancies breast cancers lung cancers head and neck cancers brain tumors sarcomas pediatric cancers and treatments combined with radiation therapy Clarifies the complex regulatory aspects behind the development and approval of immunotherapy drugs

Viral Impact on CNS: Mechanisms of Immune Dysfunction and Cognitive Decline, 2nd edition Thomas A. Angelovich, Sonia Mediouni, Bruce James Brew, Melissa Jayne Churchill, Jacob D. Estes, Robyn Klein, 2025-09-25 Viral infections pose significant threats to human health with many viruses capable of infiltrating the central nervous system CNS and causing severe consequences such as immune activation encephalitis and cognitive impairment Notable viruses like HIV EBV HCV JC virus CMV and the recent SARS CoV 2 have been linked to neurodegeneration and cognitive decline These viruses can impact the CNS through direct infection of

CNS cells such as microglia astrocytes oligodendrocytes and neurons leading to altered cell homeostasis blood brain barrier damage and leukocyte recruitment Additionally systemic inflammation from viral infections outside the CNS can exacerbate or independently cause immune dysfunction in the brain Despite these insights the specific mechanisms and effects of many pathogens on the brain remain unclear This research topic seeks to consolidate current evidence on how viruses affect CNS homeostasis and cell function contributing to pathological outcomes It aims to identify potential similarities and differences in the mechanisms and effects of various viruses on the CNS with a focus on the long term impact on resident brain cells This research topic aims to elucidate the immunological consequences of viral infections on brain homeostasis and cognitive function By examining the effects of different viruses on the CNS the research seeks to uncover the mechanisms driving immune dysfunction and cognitive impairment The ultimate goal is to inform strategies for targeting and eradicating viruses from the CNS thereby improving brain health for millions affected by viral infections annually To gather further insights into the immunological consequences of viral infections on brain homeostasis and cognitive impairment we welcome articles addressing but not limited to the following themes Studies assessing the effects of viruses including but not limited to HIV SARS CoV 2 Epstein Barr Virus and Zika virus on the central nervous system Basic mechanistic studies in vitro in vivo ex vivo exploring the effects of viral infection exposure or immune activation on CNS cell homeostasis and function Investigations into viral persistence in the CNS including mechanisms and consequences Clinical trials and case reports examining the effects of viral infection on immune activation in the brain
