Joint external evaluation of the International Health Regulations (2005) core capacities of Ethiopia World Health Organization, 2025-08-20 The primary goal of the Joint External Evaluation JEE in Ethiopia was to assess capacities in 19 technical areas to comply with the International Health Regulations 2005 IHR The exercise was held from 18 22 September 2023 in Bishoftu The evaluation showed areas for improvement but importantly areas that provided a strong foundation for the work of health security preparedness including application of the whole of government approach in IHR implementation due to strong political will presence and availability of several legal instruments policies and guidelines for IHR implementation significant partner support towards a strong health security preparedness structure in the country existence of a very strong multisectoral coordination mechanism for public health response the presence of a very robust One Health platform at both national and regional level strong robust IHR technical leadership and stewardship There is recognized capacity to implement IHR in all assessed 19 technical areas to achieve the required minimum core capacities There is a need for continuous training of key cadres across the relevant sections and sectors and this will go a long way to strengthen the existing mechanisms and

capacities of Ethiopia to respond to public health events and major public health risks WHO guideline on preventive chemotherapy for public health control of strongyloidiasis World Health Organization, 2024-07-24 Human strongyloidiasis is a soil transmitted helminth caused by infection with *Strongyloides stercoralis* and it is estimated to infect 300 600 million people worldwide In recent years the World Health Organization WHO has been contacted by the health ministries of several countries in which strongyloidiasis is endemic for advice on how to address the disease as a public health problem While there are no public health programmes specifically for control of strongyloidiasis in some settings preventive chemotherapy PC with ivermectin are being conducted to control lymphatic filariasis and onchocerciasis These programmes have demonstrated a reduction in prevalence of *S. stercoralis* infection suggesting that PC may be a potential public health strategy in areas endemic for strongyloidiasis WHO convened a guideline development group GDG to address the need to control strongyloidiasis and develop guidance The objective of this WHO guideline is to provide an evidence informed recommendation on whether PC with ivermectin as a public health intervention could reduce the disease burden After considering all available evidence The GDG made one recommendation which is annual mass drug administration with single dose ivermectin in all age groups from 5 years and above in endemic settings with prevalence of *Strongyloides stercoralis* infection 5% Current Topics in Zoonoses Alfonso J. Rodriguez-Morales, 2024-06-26 Zoonoses diseases transmitted from animals to humans hold immense global significance impacting public health economies and ecosystems Adopting the One Health approach which recognizes the interconnectedness of human animal and environmental health is crucial in tackling these challenges Zoonotic diseases pose significant public health threats Diseases like rabies Ebola and influenza have claimed countless lives worldwide Without proper management these diseases can rapidly escalate into pandemics as seen with the COVID 19 pandemic originating from a zoonotic transmission The health of humans and animals are intricately linked making collaborative efforts essential for disease prevention and control Zoonoses have profound economic implications Outbreaks can devastate agricultural sectors leading to loss of livestock reduced productivity and trade restrictions For instance the 2001 foot and mouth disease outbreak in the United Kingdom resulted in billions of dollars in economic losses Addressing zoonoses through a One Health approach can safeguard livelihoods and ensure food security Furthermore zoonotic diseases impact biodiversity and ecosystems Diseases like West Nile virus and Lyme disease can affect wildlife populations disrupting ecosystems and biodiversity Additionally habitat destruction and wildlife trafficking increase the likelihood of zoonotic spillover events We can mitigate these risks and preserve ecosystem integrity through conservation efforts and sustainable land use practices The global importance of zoonoses cannot be overstated By embracing the One Health approach we can address these complex challenges comprehensively Collaboration between human and veterinary medicine environmental science and other disciplines is essential for effective disease surveillance prevention and control By prioritizing the health of people animals and the environment we can build a safer healthier future for all **Antimicrobial**
