Architects' Data Ernst Neufert, Peter Neufert, 2012-03-26 Neufert's Architects Data is an essential reference for the initial design and planning of a building project. It provides in one concise volume the core information needed to form the framework for the more detailed design and planning of any building project. Organised largely by building type, it covers the full range of preliminary considerations and with over 6200 diagrams, it provides a mass of data on spatial requirements. Most illustrations are dimensioned and each building type includes plans, sections, site layouts and design details. An extensive bibliography and a detailed set of metric/imperial conversion tables are included. Since it was first published in Germany in 1936, Ernst Neufert's handbook has been progressively revised and updated through 39 editions and many translations. This fourth English language edition is translated from the 39th German edition and represents a major new edition for an international English speaking readership. Reviews of the Previous Edition: Neufert's Architects Data was the first book I bought when I started my studies in architecture. It was invaluable for me then and it is still a useful aid in my designs. Cesar Pelli. With this thorough rewrite, Neufert has produced yet again an invaluable reference book. The Architects Journal.
