**Environmental Dispute Resolution** Lawrence S. Bacow, Michael Wheeler, 2013-06-29 This book has its origins in an MIT research project that was funded by the U S Environmental Protection Agency EPA Our immediate objective was to prepare a set of case studies that examined bargaining and negotiation as they occurred between government environmental advocates and regulatees throughout the traditional regulatory process The project was part of a larger effort by the EPA to make environmental regulation more efficient and less litigious The principal investigator for the research effort was Lawrence Suskind of the Department of Urban Studies and Planning Eight case studies were prepared under the joint supervision of Suskind and the authors of this book Studying the negotiating behavior of parties as we worked our way through an environmental dispute proved enlightening We observed missed opportunities for settlement

negotiating tactics that backfired and strategies that appeared to be grounded more in intuition than in thoughtful analysis. At the same time however we were struck by how often the parties ultimately managed to muddle through. People negotiated not out of some idealistic commitment to consensus but because they thought it better served their own interests. When some negotiations reached an impasse people improvised mediation. These disputants succeeded in spite of legal and institutional barriers even though few of them had a sophisticated understanding of negotiation.

**Sacramento River Water Reliability Study**, 2005 Biological Wastewater Treatment, Revised and Expanded Carlos D.M. Filipe, C.P. Leslie Grady, Jr., 1998-10-15. Written by noted experts in the field sharing extensive academic and industrial experience this thoroughly updated Second Edition covers commonly used and new suspended and attached growth reactors. The authors discuss combined carbon and ammonia oxidation, activated sludge, biological nutrient removal, aerobic digestion, anaerobic processes, lagoons, trickling filters, rotating biological contactors, fluidized beds, and biologically aerated filters. They integrate the principles of biochemical processes with applications in the real world, communicating approaches to the conception, design, operation, and optimization of biochemical unit operations in a comprehensive yet lucid manner.
