From publisher s description **Making a Grade** James Elwick,2021-03-01 Starting in the 1850s achievement tests became
standardized in the British Isles and were administered on an industrial scale By the end of the century more than two
million people had written mass exams particularly in science technology and mathematics Some candidates responded to
this standardization by cramming or cheating others embraced the hope that such tests rewarded not only knowledge but
also merit Written with humour *Making a Grade* looks at how standardized testing practices quietly appeared and then
spread worldwide This book situates mass exams marks and credentials in an emerging paper based meritocracy arguing
that such exams often first appeared as cameras to neutrally record achievement and then became engines to change
education as people tailored their behaviour to fit these tests Taking the perspectives of both examiners and examinees
Making a Grade claims that our own culture s desire for accountability through objective testing has a long history
