Theœ Stanford GraphBase Donald E. Knuth, The Stanford GraphBase Donald Ervin Knuth, 1993 Data Data Structures Complex Networks Reuven Cohen, Shlomo Havlin, 2010-07-08 Examining important results and analytical techniques this graduate level textbook is a step by step presentation of the structure and function of complex networks Using a range of examples from the stability of the internet to efficient methods of immunizing populations and from epidemic spreading to how one might efficiently search for individuals this textbook explains the theoretical methods that can be used and the experimental and analytical results obtained in the study and research of complex networks Giving detailed derivations of many results in complex networks theory this is an ideal text to be used by graduate students entering the field End of chapter review questions help students monitor their own understanding of the materials presented

Hybrid Intelligence for Social Networks Hema Banati, Siddhartha Bhattacharyya, Ashish Mani, Mario Köppen, 2017-11-28 This book explains aspects of social networks varying from development and application of new artificial intelligence and computational intelligence techniques for social networks to understanding the impact of social networks Chapters 1 and 2 deal with the basic strategies towards social networks such as mining text from such networks and applying social network metrics using a hybrid approach Chaps 3 to 8 focus on the prime research areas in social networks community detection influence maximization and opinion mining Chapter 9 to 13 concentrate on studying the impact and use of social networks in society primarily in education commerce and crowd sourcing The contributions provide a multidimensional approach and the book will serve graduate students and researchers as a reference in computer science electronics engineering communications and information technology **Digital Cultural Heritage** Horst Kremers, 2019-06-21 This book provides an overview of various application spheres and supports further innovations needed in information management and in the processes of knowledge generation The professions organizations and scientific associations involved are unusually challenged by the complexity of the data situation Cartography has always been the central field of application for georeferencing digital cultural heritage DCH objects It is particularly important in enabling spatial relation analysis between any number of DCH objects or of their granular details In addition to the pure geometric aspects the cognitive relations that lead to knowledge representation and derivation of innovative use processes are also of increasing importance Further there is a societal demand for spatial reference and analytics e q the extensive use of cognitive concepts of map and atlas for a variety of social topics in the media There is a huge geometrical logical cognitive potential for complex multimedia digital cultural heritage databases and stakeholders expect handling transmission and processing operations with guaranteed long term availability for all other stakeholders In the future whole areas of digital multimedia databases will need to be processed to further our understanding of historical and cultural contexts This is an important concern for the information society and presents significant challenges for cartography in all these domains This book collects innovative technical and

scientific work on the entire process of object digitization including detail extraction archiving and interoperability of multimedia DCH data Algorithms and Complexity Giancarlo Bongiovanni, Giuseppe Di Battista, 1997-02-26 This book constitutes the refereed proceedings of the Third Italian Conference on Algorithms and Complexity CIAC 97 held in Rome Italy in March 1997 The 25 revised full papers included in the volume were carefully selected from a total of 74 submissions also included is an invited paper and an invited abstract All in all the papers present an interesting snapshot of current research activities and recent results in theory and applications of sequential distributed and parallel algorithms data Good Data Angela Daly, Monigue Mann, S. Kate Devitt, 2019-01-23 Moving away structures and computational complexity from the strong body of critique of pervasive bad data practices by both governments and private actors in the globalized digital economy this book aims to paint an alternative more optimistic but still pragmatic picture of the datafied future The authors examine and propose good data practices values and principles from an interdisciplinary international perspective From ideas of data sovereignty and justice to manifestos for change and calls for activism this collection opens a multifaceted conversation on the kinds of futures we want to see and presents concrete steps on how we can start realizing good data in Machine Learning in Complex Networks Thiago Christiano Silva, Liang Zhao, 2016-01-28 This book presents practice the features and advantages offered by complex networks in the machine learning domain In the first part an overview on complex networks and network based machine learning is presented offering necessary background material In the second part we describe in details some specific techniques based on complex networks for supervised non supervised and semi supervised learning Particularly a stochastic particle competition technique for both non supervised and semi supervised learning using a stochastic nonlinear dynamical system is described in details Moreover an analytical analysis is supplied which enables one to predict the behavior of the proposed technique In addition data reliability issues are explored in semi supervised learning Such matter has practical importance and is not often found in the literature With the goal of validating these techniques for solving real problems simulations on broadly accepted databases are conducted Still in this book we present a hybrid supervised classification technique that combines both low and high orders of learning The low level term can be implemented by any classification technique while the high level term is realized by the extraction of features of the underlying network constructed from the input data Thus the former classifies the test instances by their physical features while the latter measures the compliance of the test instances with the pattern formation of the data We show that the high level technique can realize classification according to the semantic meaning of the data This book intends to combine two widely studied research areas machine learning and complex networks which in turn will generate broad interests to scientific community mainly to computer science and engineering areas Security, Privacy, and Anonymization in **Social Networks: Emerging Research and Opportunities** Tripathy, B. K., Baktha, Kiran, 2018-01-19 Technology has become profoundly integrated into modern society however this increases the risk of vulnerabilities such as hacking and

other system errors along with other online threats Security Privacy and Anonymization in Social Networks Emerging Research and Opportunities is a pivotal reference source for the most up to date research on edge clustering models and weighted social networks Presenting widespread coverage across a range of applicable perspectives and topics such as neighborhood attacks fast k degree anonymization FKDA and vertex clustering algorithms this book is ideally designed for academics researchers post graduates and practitioners seeking current research on undirected networks and greedy algorithms for social network anonymization Intelligent Methods and Big Data in Industrial Applications Robert Bembenik, Łukasz Skonieczny, Grzegorz Protaziuk, Marzena Kryszkiewicz, Henryk Rybinski, 2018-05-18 The inspiration for this book came from the Industrial Session of the ISMIS 2017 Conference in Warsaw It covers numerous applications of intelligent technologies in various branches of the industry Intelligent computational methods and big data foster innovation and enable the industry to overcome technological limitations and explore the new frontiers Therefore it is necessary for scientists and practitioners to cooperate and inspire each other and use the latest research findings to create new designs and products As such the contributions cover solutions to the problems experienced by practitioners in the areas of artificial intelligence complex systems data mining medical applications and bioinformatics as well as multimedia and text processing Further the book shows new directions for cooperation between science and industry and facilitates efficient transfer of knowledge in the area of intelligent information systems Advances in Network Clustering and Blockmodeling Patrick Doreian, Vladimir Batagelj, Anuska Ferligoj, 2020-02-03 Provides an overview of the developments and advances in the field of network clustering and blockmodeling over the last 10 years This book offers an integrated treatment of network clustering and blockmodeling covering all of the newest approaches and methods that have been developed over the last decade Presented in a comprehensive manner it offers the foundations for understanding network structures and processes and features a wide variety of new techniques addressing issues that occur during the partitioning of networks across multiple disciplines such as community detection blockmodeling of valued networks role assignment and stochastic blockmodeling Written by a team of international experts in the field Advances in Network Clustering and Blockmodeling offers a plethora of diverse perspectives covering topics such as bibliometric analyses of the network clustering literature clustering approaches to networks label propagation for clustering and treating missing network data before partitioning It also examines the partitioning of signed networks multimode networks and linked networks A chapter on structured networks and coarsegrained descriptions is presented along with another on scientific coauthorship networks The book finishes with a section covering conclusions and directions for future work In addition the editors provide numerous tables figures case studies examples datasets and more Offers a clear and insightful look at the state of the art in network clustering and blockmodeling Provides an excellent mix of mathematical rigor and practical application in a comprehensive manner Presents a suite of new methods procedures algorithms for partitioning networks as well as new techniques for visualizing
