Real-Time and Distributed Real-Time Systems Amitava Gupta, Anil Kumar Chandra, Peter Luksch, 2016-04-27 Digital computers have revolutionized computation and transformed how computers are used to control systems in real life giving birth to real time systems Furthermore massive developments in the communications domain have made it possible for real time systems to perform coordinated actions over communication interfaces resulting in the evolution of

Fundamental Approaches to Software Engineering Michel Wermelinger, Tiziana Margaria-Steffen, 2004-03-01 ETAPS 2004 was the seventh instance of the European Joint Conferences on Theory and Practice of Software ETAPS is an annual federated conference that was established in 1998 by combining a number of existing and new conferences This year it comprised several conferences FOSSACS FASE ESOP CC TACAS 23 satellite workshops 1 tutorial and 7 invited lectures not including those that are specific to the satellite events The events that comprise ETAPS address various aspects of the system development process including specification design implementation analysis and improvement The languages methodologies and tools that support these activities are all well within its scope Different blends of theory and practice are represented with an inclination towards theory with a practical motivation on the one hand and soundly based practice on the other Many of the issues involved in software design apply to systems in general including hardware systems and the emphasis on software is not intended to be exclusive

The Practice of Formal Methods Ana Cavalcanti, James Baxter, 2024-09-03 This Festschrift dedicated to Cliff Jones contains papers written by many of his closest collaborators Cliff has an exceptional international standing for his groundbreaking research and leadership within the practice of formal methods his career encompasses significant contributions to academia industry policy and service Cliff is a Fellow of the Royal Academy of Engineering ACM BCS and IET and in 2015 he was the inaugural Fellow of the Formal Methods Europe association His career has included industry research in the UK Austria and Belgium a PhD at the University of Oxford and academic and research roles at the University of Cambridge and the University of Manchester and since 1999 at Newcastle University Throughout his career he has championed the essential role of formalism in design processes His collaboration at IBM in the 1970s led to the creation of the Vienna Development Method VDM a seminal contribution that has influenced both practical industry applications and theoretical advancements Cliff was the founding editor of the ACM journal Formal Aspects of Computing a founder of the Formal Methods symposium and he played a pivotal role in the IFIP Working Groups on Programming Methodology and Verified Software His policy advocacy has been instrumental in fostering public discourse on the reliability of computing systems The 30 contributions in

They deal with latest research results and ideas on bridging the gap between formal methods and software engineering. **Unifying Theories of**

Programming Pedro Ribeiro, Augusto Sampaio, 2019-09-23 This volume contains papers presented at UTP 2019 the 7th International Symposium on Unifying Theories of Programming held in Porto Portugal on the 8th of October 2019. This edition of the UTP symposium is in honor of Sir Tony Hoare on the occasion of his 85th birthday. The papers contained in this volume were invited and friendly refereed original contributions sought from the UTP community. One of the papers is from the distinguished invited speaker Tony Hoare himself. Nine other additional papers compose this volume covering several aspects of Unifying Theories of Programming. **Unifying Theories of Programming** Jonathan P. Bowen, Huibiao

Zhu, 2017-01-10 This book constitutes the refereed proceedings of the 6th International Symposium on Unifying Theories of Programming UTP 2016 held in Reykjavik Iceland in June 2016 in conjunction with the 12th International Conference on Integrated Formal Methods iFM 2016. The 8 revised full papers presented were carefully reviewed and selected from 10 submissions. They deal with the fundamental problem of combination of formal notations and theories of programming that define in various different ways many common notions such as abstraction, refinement, choice, termination, feasibility, locality, concurrency, and communication. They also show that despite many differences such theories may be unified in a way that greatly facilitates their study and comparison. Specification and Design Methodology for Real-Time Embedded Systems

Randall S. Janka, 2012-12-06 Specification and design methodology has seen significant growth as a research area over the last decade, tracking but lagging behind VLSI design technology in general and the CAD industry in particular. The commercial rush to market tries to leverage existing technology which fuels CAD design tool development. Paralleling this is very active basic and applied research to investigate and move forward rational and effective methodologies for accomplishing digital design, especially in the field of hardware/software codesign. It is this close relationship between industry and academia that makes close cooperation between researchers and practitioners so important, and monographs like this that combine both abstract concept and pragmatic implementation deftly bridge this often gaping chasm. It was at the IEEE ACM Eighth International Symposium on Hardware/Software Codesign where I met the author of this monograph, Dr. Randall Janka, who was presenting some of his recent dissertation research results on specification and design methodology or, as he has so succinctly defined this sometimes ambiguous concept, the tools and rules. Where so many codesign researchers are trying to prove out different aspects of codesign and using toy applications to do so, Dr. Janka had

developed a complete specification and design methodology and prototyped the infrastructure and proven its viability utility and effectiveness using a demanding real world application of a real time synthetic aperture radar imaging processor that was implemented with embedded parallel processors *Automotive Electronics Reliability* Ronald K Jurgen, 2010-08-10
