MCOP Connections: Waves: sublevel 5

Background:

The behavior of a traveling wave (or pulse) upon reaching the end of a medium is referred to as boundary behavior. When one medium ends, another medium begins; the interface of the two media is referred to as the boundary and the behavior of a wave at that boundary is described as its boundary behavior. A pulse that is approaching a boundary is referred to as the incident pulse. Upon reaching the boundary, a portion of the incident pulse will be reflected and remain in the same medium; and a portion of the incident pulse will pass into (or be transmitted into) the other medium which lies beyond the boundary. The portion of the pulse that is reflected is referred to as the reflected pulse and the portion that passes into the other medium is referred to as the transmitted pulse. A proper understanding of the boundary behavior of waves involves an ability to answer the following questions.

Fixed and Free End Reflections

1. State the rule that describes how a pulse will behave at a free end and a fixed end.
2. Express your understanding of reflection of waves at the end of a medium by drawing the size and orientation of the reflected pulse for the two cases below - reflection off a free end and a fixed end.

Fixed End Reflection

Free End Reflection

Reflection and Transmission of an Incident Pulse at a Boundary Between Two Media

A pulse is moving from a more-dense medium to a less-dense medium as shown in the diagram below.

3. The reflected pulse in medium 1 _____ (will, will not) be inverted because _____.
4. The speed of the transmitted pulse will be _____ (greater than, less than, the same as) the speed of the incident pulse.
5. The speed of the reflected pulse will be _____ (greater than, less than, the same as) the speed of the incident pulse.
6. The wavelength of the transmitted pulse will be _____ (greater than, less than, the same as) the wavelength of the incident pulse.

Holographic Quantum Matter Sean A. Hartnoll, Andrew Lucas, Subir Sachdev, 2018-03-16 A comprehensive overview of holographic methods in quantum matter written by pioneers in the field This book written by pioneers in the field offers a comprehensive overview of holographic methods in quantum matter It covers influential developments in theoretical physics making the key concepts accessible to researchers and students in both high energy and condensed matter physics The book provides a unique combination of theoretical and historical context technical results extensive references to the literature and exercises It will give readers the ability to understand the important problems in the field both those that have been solved and those that remain unsolved and will enable them to engage directly with the current literature The book describes a particular interface between condensed matter physics gravitational physics and string and quantum field theory made possible by holographic duality The chapters cover such topics as the essential workings of the holographic correspondence strongly interacting quantum matter at a fixed commensurate density compressible quantum matter with a variable density transport in quantum matter the holographic description of symmetry broken phases and the relevance of the topics covered to experimental challenges in specific quantum materials Holographic Quantum Matter promises to be the definitive presentation of this material

Irrigation & Power Abstracts, 1973 Methods for Partial Differential Equations Marcelo R. Ebert, Michael Reissig, 2018-02-23 This book provides an overview of different topics related to the theory of partial differential equations Selected exercises are included at the end of each chapter to prepare readers for the research project for beginners proposed at the end of the book It is a valuable resource for advanced graduates and undergraduate students who are interested in specializing in this area The book is organized in five parts In Part 1 the authors review the basics and the mathematical prerequisites presenting two of the most fundamental results in the theory of partial differential equations the Cauchy Kovalevskaja theorem and Holmgren's uniqueness theorem in its classical and abstract form It also introduces the method of characteristics in detail and applies this method to the study of Burger's equation Part 2 focuses on qualitative properties of solutions to basic partial differential equations explaining the usual properties of solutions to elliptic parabolic and hyperbolic equations for the archetypes Laplace equation heat equation and wave equation as well as the different features of each theory It also discusses the notion of energy of solutions a highly effective tool for the treatment of non stationary or evolution models and shows how to define energies for different models Part 3 demonstrates how phase space analysis and interpolation techniques are used to prove decay estimates for solutions on and away from the conjugate line It also examines how terms of lower order mass or dissipation or additional regularity of the data may influence expected results Part 4 addresses semilinear models with power type non linearity of source and absorbing type in order to determine critical exponents two well known critical exponents the Fujita exponent and the Strauss exponent come into play Depending on concrete models these critical exponents divide the range of admissible powers in classes which make it possible to prove
