Advanced Information Systems Engineering Anne Banks Pidduck, John Mylopoulos, Carson C. Woo, M.T. Ozsu, 2003-08-01 The explosive growth of the Internet and the Web have created an ever growing demand for information systems and ever growing challenges for Information Systems Engineering The series of Conferences on Advanced Information Systems Engineering CAiSE was launched in Scandinavia by Janis Bubenko and Arne Solvberg in 1989 became an important European conference and was held annually in major European sites throughout the 1990s Now in its 14th year CAiSE was held for the first time outside Europe showcasing international research on information systems and their engineering Not surprisingly this year the conference enjoyed unprecedented attention In total the conference received 173 paper submissions the highest number ever for a CAiSE conference Of those 42 were accepted as regular papers and 26 as short poster papers In addition the conference received 12 proposals for workshops of which 8 were approved while 4 tutorials were selected from 15 submissions The technical program was put together by an international committee of 81 experts In total 505 reviews were submitted with every member of the committee contributing

Decisions on all submissions were reached at a program committee meeting in Toronto on January 26 27 2002 Workshop and tutorial proposals were handled separately by committees chaired by Patrick Martin workshops and Jarek Gryz and Richard Paige tutorials We wish to extend a great THANK YOU to all members of the program and organizing committees for their volunteer contributions of time and expertise The fact that so many busy and famous people took the trouble to help us with the organization of this conference and the formation of its technical program speaks well for the future of CAiSE and the field of Information Systems Engineering

Objects, Abstraction, Data Structures and Design Elliot B. Koffman, Paul A. T. Wolfgang, 2005-10-20 Koffman and Wolfgang introduce data structures in the context of C programming They embed the design and implementation of data structures into the practice of sound software design principles that are introduced early and reinforced by 20 case studies Data structures are introduced in the C STL format whenever possible Each new data structure is introduced by describing its interface in the STL Next one or two simpler applications are discussed then the data structure is implemented following the interface previously introduced Finally additional advanced applications are covered in the case studies and the cases use the STL In the implementation of each data structure the authors encourage students to perform a thorough analysis of the design approach and expected performance before actually undertaking detailed design and implementation Students gain an understanding of why different data structures are needed the applications they are suited for and the advantages and disadvantages of their possible implementations Case studies follow a five step process problem specification analysis design implementation and testing that has been adapted to object oriented programming Students are encouraged to think critically about the five step process and use it in their problem solutions

Several problems have extensive discussions of testing and include methods that automate the testing process. Some cases are revisited in later chapters and new solutions are provided that use different data structures. The text assumes a first course in programming and is designed for Data Structures or the second course in programming especially those courses that include coverage of OO design and algorithms. A C primer is provided for students who have taken a course in another programming language or for those who need a review in C. Finally more advanced coverage of C is found in an appendix.

Course Hierarchy Course is the second course in the CS curriculum. Required of CS majors. Course names include Data Structures and Data Structures Algorithms.

Object Oriented Programming with C++, 2nd Edition Khurana Rohit, The revised edition of Object Oriented Programming with C has become more comprehensive with the inclusion of several topics. Like its previous edition it provides an in depth coverage of basic as well as advanced concepts of object oriented programming such as encapsulation abstraction inheritance polymorphism dynamic binding templates exception handling streams and Standard Template Library STL and their implementation through C. Besides the revised edition includes a chapter on multithreading. The book meets the requirements of students enrolled in various courses at undergraduate and postgraduate levels including BTech BE BCA BSc MSc and MCA. It is also useful for software developers who wish to expand their knowledge of C.

New in This Edition Inclusion of topics like empty class anonymous objects recursive constructors and object slicing. A chapter on multithreading explaining how concurrency is implemented in C.

Key Features Presentation for easy grasp through chapter objectives suitable tables diagrams and programming examples. Notes and key points provided to make the reader self sufficient.

Examination oriented approach through objective and descriptive questions at the end of each chapter to help students in the preparation for annual and semester tests.

Intelligent Data Engineering and Automated Learning - IDEAL 2008 Colin Fyfe, Dongsup Kim, Soo-Young Lee, Hujun Yin, 2008-11-04. IDEAL 2008 was the ninth IDEAL conference to take place; earlier editions were held in Hong Kong the UK Australia and Spain. This was the first time though hopefully not the last time that it took place in Daejeon South Korea during November 2-5 2008. As the name suggests the conference attracts researchers who are involved in either data engineering or learning or increasingly both. The former topic involves such aspects as data mining or intelligent knowledge discovery from databases information retrieval systems data warehousing speech image video processing and multimedia data analysis. There has been a traditional strand of data engineering at IDEAL conferences which has been based on financial data management such as fraud detection portfolio analysis prediction and so on. This has more recently been joined by a strand devoted to bioinformatics particularly neuroinformatics and gene expression analysis. Learning is the other major topic for these conferences and this is addressed by researchers in artificial neural networks machine learning evolutionary algorithms artificial immune systems and algorithms probabilistic modelling fuzzy systems and agent modelling. The core of all these algorithms is adaptation.

JBuilder Developer's Guide Michael Landy, Saleem Siddiqui, Jeff Swisher, 2003. JBuilder Developer's Guide provides comprehensive

coverage of JBuilder from the practitioner's viewpoint. The authors develop a consolidated application throughout the chapters allowing conceptual cohesion and illustrating the use of JBuilder to build real world applications. The examples can be compiled and run under JBuilder Personal edition, a free edition of JBuilder. JBuilder Developer's Guide is not version specific but explains the latest JBuilder 6.7 and 8 features such as enterprise J2EE application development, CORBA, SOAP, XML tools, Enterprise JavaBeans, JavaServer Pages, Servlets, and JavaBeans technology. JBuilder repeatedly wins developer's choice awards as the best visual tool for developing Java applications.

Handbook Of Software Engineering And Knowledge Engineering, Vol 2: Emerging Technologies Shi-kuo Chang, 2002-05-10. This is the first handbook to cover comprehensively both software engineering and knowledge engineering, two important fields that have become interwoven in recent years. Over 60 international experts have contributed to the book. Each chapter has been written in such a way that a practitioner of software engineering and knowledge engineering can easily understand and obtain useful information. Each chapter covers one topic and can be read independently of other chapters, providing both a general survey of the topic and an in-depth exposition of the state of the art. Practitioners will find this handbook useful when looking for solutions to practical problems. Researchers can use it for quick access to the background, current trends, and most important references regarding a certain topic. The handbook consists of two volumes. Volume One covers the basic principles and applications of software engineering and knowledge engineering. Volume Two will cover the basic principles and applications of visual and multimedia software engineering, knowledge engineering, data mining for software, knowledge and emerging topics in software engineering and knowledge engineering.

Knowledge Engineering: Practice and Patterns Aldo Gangemi, Jérôme Euzenat, 2008-09-22. Knowledge is considered as the most important asset in our modern society. It has now penetrated all facets of computing practice, from the rise of knowledge management to the Semantic Web and from the blog culture to the knowledge economy. This penetration has made proper knowledge engineering a most required feature. This volume contains the papers presented at the 16th International Conference on Knowledge Engineering and Knowledge Management EKAW 2008 held in Acitrezza, Sicily, Italy, September 29 to October 3, 2008. EKAW 2008 is concerned with all aspects of eliciting, acquiring, modelling, and managing knowledge and their role in the construction of knowledge intensive systems and services for the Semantic Web, knowledge management, e-business, natural language processing, intelligent integration, information, etc. This year we paid special attention to the topic of knowledge patterns that can be considered as good practice or models that are applied or reused throughout the knowledge engineering life cycle. Hence, beyond traditional topics of EKAW, we solicited papers that cover research on how to describe, classify, model, extract, and apply knowledge patterns in the design of ontologies, applications, and products. We have paid special attention to the description of experiences that involve the application and identification of knowledge patterns in social network analysis, natural language processing, multimedia analysis, pattern recognition, etc.
