The What and How of Modelling Information and Knowledge C. Maria Keet, 2023-11-17 The main aim of this book is to introduce a group of models and modelling of information and knowledge comprehensibly Such models and the processes for how to create them help to improve the skills to analyse and structure thoughts and ideas to become more precise to gain a deeper understanding of the matter being modelled and to assist with specific tasks where modelling helps such as reading comprehension and summarisation of text The book draws ideas and transferrable approaches from the plethora of types of models and the methods techniques tools procedures and methodologies to create them in computer

science This book covers five principal declarative modelling approaches to model information and knowledge for different yet related purposes It starts with entry level mind mapping to proceed to biological models and diagrams onward to conceptual data models in software development and from there to ontologies in artificial intelligence and all the way to ontology in philosophy Each successive chapter about a type of model solves limitations of the preceding one and turns up the analytical skills a notch These what and how for each type of model is followed by an integrative chapter that ties them together comparing their strengths and key characteristics ethics in modelling and how to design a modelling language In so doing we ll address key questions such as what type of models are there How do you build one What can you do with a model Which type of model is best for what purpose Why do all that modelling The intended audience for this book is professionals students and academics in disciplines where systematic information modelling and knowledge representation is much less common than in computing such as in commerce biology law and humanities And if a computer science student or a software developer needs a quick refresher on conceptual data models or a short solid overview of ontologies then this book will serve them well

Embley, Bernhard Thalheim, 2012-04-23 Conceptual modeling is about describing the semantics of software applications at a high level of abstraction in terms of structure behavior and user interaction Embley and Thalheim start with a manifesto stating that the dream of developing information systems strictly by conceptual modeling as expressed in the phrase the model is the code is becoming reality The subsequent contributions written by leading researchers in the field support the manifesto's assertions showing not only how to abstractly model complex information systems but also how to formalize abstract specifications in ways that let developers complete programming tasks within the conceptual model itself They are grouped into sections on programming with conceptual models structure modeling process modeling user interface modeling and special challenge areas such as conceptual geometric modeling information integration and biological conceptual modeling The Handbook of Conceptual Modeling collects in a single volume many of the best conceptual modeling ideas techniques and practices as well as the challenges that drive research in the field Thus it is much more than a traditional handbook for advanced professionals as it also provides both a firm foundation for the field of conceptual modeling and points researchers and graduate students towards interesting challenges and paths for how to contribute to this fundamental field of computer science **eBook: Database Systems Concepts 6e** SILBERSCHATZ, 2010-06-16 eBook Database Systems Concepts 6e Model Driven Engineering Languages and Systems Jon Whittle, Tony Clark, Thomas Kühne, 2011-10-12 This book constitutes the refereed proceedings of the 14th International Conference on Model Driven Engineering Languages and Systems MODELS 2011 held in Wellington New Zealand in October 2011 The papers address a wide range of topics in research foundations track and practice applications track For the first time a new category of research papers vision papers are included presenting outside the box thinking The foundations track received 167 full paper submissions of which 34 were selected for presentation Out of these 3 papers were vision papers The application track received 27 submissions of which 13 papers were selected for presentation The papers are organized in topical sections on model transformation model complexity aspect oriented modeling analysis and comprehension of models domain specific modeling models for embedded systems model synchronization model based resource management analysis of class diagrams verification and validation refactoring models modeling visions logics and modeling development methods and model integration and collaboration Information Modeling and Relational Databases Terry Halpin, Tony Morgan, 2024-07-09 Information Modeling and Relational Databases Third Edition provides an introduction to ORM Object Role Modeling and much more In fact it is the only book to go beyond introductory coverage and provide all of the in depth instruction you need
