Fluid for Passenger Car Type Automatic Transmissions Fuels and Lubricants TC 3 Driveline and Chassis Lubrication,1986 This SAE Information Report details some of the equipment and procedures used to measure critical characteristics of automatic transmission fluid ATF used in current automatic transmissions It is intended to assist those concerned with the design of transmission components and with the selection and marketing of automatic transmission fluids for the use in passenger car and light duty truck automatic transmissions The information contained herein will be helpful in understanding the terms related to properties designations and service applications of automatic transmission fluids

Factory-Service Automatic Transmission Fluid Requirements S. R. Sprague,R. L. Woodruff,1963 Factory service automatic transmission fluids possess physical properties and performance features which differ substantially from the minimum Type A Suffix A specification requirements In some cases either the transmission life would be impaired by the use of a minimum Type A Suffix A fluid or desirable performance features would be deteriorated These special factory requirements are discussed including low temperature fluidity frictional properties clutch durability antiwear characteristics elastomer compatibility and oxidative stability The specialty factory fluids present questions concerning make up oil additions and drain and refill practices In spite of these however transmission manufacturers will continue to include the lubricant as an integral part of the total design Thus service station fluids should be carefully chosen to compromise manufacturers conflicting recommendations Automatic Transmission Fluid - Component Effects on Friction T. SAE Fuels and Lubricants Technical Committee a to assist the designers and users of heavy duty transmissions in the
selection of powershift transmission fluids for field use and b to promote a uniform practice for use by marketers of
lubricants and equipment builders in identifying and recommending these fluids by type This classification is designed for
fluids used in heavy duty truck bus earthmoving and marine transmissions or steering clutches The fluids must perform the
following five functions 1 Transmit hydrodynamic energy in a torque converter 2 Transmit hydrostatic energy in hydraulic
circuits 3 Lubricate bearings bushings gears and moving parts 4 Provide proper frictional properties in lubricated bands and
clutches 5 Provide heat transfer medium for liquid or air cooled systems to maintain suitable operational temperature range
