Properties of Water

Water is essential for life. It is a polar molecule, which means it has a partial positive charge on the hydrogen atoms and a partial negative charge on the oxygen atom. This polarity allows water to form hydrogen bonds, which are responsible for many of its unique properties.

Properties of Water

High specific heat, low thermal conductivity, high heat of vaporization, low heat of fusion, high surface tension.

Property	Function	Structure
High specific heat	Helps maintain a stable internal temperature.	Hydrogen bonds between water molecules.
Low thermal conductivity	Helps maintain a stable internal temperature.	Hydrogen bonds between water molecules.
High heat of vaporization	Helps maintain a stable internal temperature.	Hydrogen bonds between water molecules.
Low heat of fusion	Helps maintain a stable internal temperature.	Hydrogen bonds between water molecules.
High surface tension	Helps maintain a stable internal temperature.	Hydrogen bonds between water molecules.

The pH Scale

The pH scale is a logarithmic scale that measures the acidity or basicity of a solution. It ranges from 0 to 14, with 7 being neutral. Solutions with a pH below 7 are acidic, and solutions with a pH above 7 are basic.

"Acidosis is a condition in which the pH of the blood is too low (below 7.35). It can be caused by a variety of factors, including lung disease, kidney disease, and diabetes."

"Alkalosis is a condition in which the pH of the blood is too high (above 7.45). It can be caused by a variety of factors, including lung disease, kidney disease, and diabetes."

"Enzymes are biological molecules that speed up chemical reactions. They are made of proteins and are highly specific to the reactions they catalyze. Enzymes are essential for life, as they allow chemical reactions to occur at a rate that is compatible with life."

Enzymes (proteins) are catalysts

The Geometry of Genocide Bradley Campbell, 2015-10-29 In The Geometry of Genocide Bradley Campbell argues that genocide is best understood not as deviant behavior but as social control a response to perceived deviant behavior on the

part of victims Using Donald Black s method of pure sociology Campbell considers genocide in relation to three features of social life diversity inequality and intimacy According to this theory genocidal conflicts begin with changes in diversity and inequality such as when two previously separated ethnic groups come into contact or when a subordinate ethnic group attempts to rise in status Further conflicts are more likely to result in genocide when they occur in a context of social distance and inequality and when aggressors and victims cannot be easily separated Campbell applies his approach to five cases the killings of American Indians in 1850s California Muslims in 2002 India and 1992 Bosnia Tutsis in 1994 Rwanda and Jews in 1940s Europe These case studies which focus in detail on particular incidents within each instance of genocide demonstrate the theory s ability to explain an array of factors including why genocide occurs and who participates Campbell s theory uniquely connects the study of genocide to the larger study of conflict and social control By situating genocide among these broader phenomena *The Geometry of Genocide* provides a novel and compelling explanation of genocide while furthering our understanding of why humans have conflicts and why they respond to conflict as they do
