The university today is a postmodern neo liberal competitive boundary less knowledge conglomerate a far cry from its historical traditional classical and collegial roots There is a body of literature on deanship that points to its evolving nature in the contemporary academe characterised by complexity and change Balancing academic demands simultaneously with the requirements for effective performance leadership and management lies at the heart of this very challenging bridging role nowadays Deans are generally former academics emerging from a traditional collegial space and often catapulted into the relatively unknown domain of executive management with its related problems Deans nowadays are required to be more than collegial intellectual leaders They are also meant to be fiscal and human resource experts fundraisers politicians and diplomats Deanship in the Global South Bridging Troubled Waters is about the deans lived reality as they try to balance the demands of both the academe from which they emerge and the administration to whom they now need to account Their lack of preparation and inadequate support points to the need for a more strategic integrated approach to leadership development within their critical bridging roles between the academe and administration     **Rethinking Revolution** Leo Panitch,Greg Albo,2016-12 One hundred years ago October 1917 galvanized leftists and oppressed peoples around the globe and became the lodestar for 20th century politics Today the left needs to reckon with this legacy and transcend it Social change as it was understood in the 20th century appears now to be as impossible as revolution leaving the left to rethink the relationship between capitalist crises as well as the conceptual tension between revolution and reform Populated by an array of passionate thinkers and thoughtful activists Rethinking Revolution reappraises the historical effects of the Russian revolution positive and negative on political intellectual and cultural life and looks at consequent revolutions after 1917 Change needs to be understood in relation to the distinct trajectories of radical politics in different regions But the main purpose of this Socialist Register edition one century after Red October is to look forward to what might happen next Acclaimed authors interrogate and explore compelling issues including Greg Albo New socialist strategies or detours Jodi Dean Are the multitudes communing Revolutionary agency and political forms today Adolph Reed Are racial minorities revolutionary agents Zillah Eisenstein Revolutionary feminisms today Nina Power Accelerated technology decelerated revolution David Schwartzman Beyond global warming Is solar communism possible Andrea Malm Revolution and counter revolution in an era of climate change     **Mesozoic Resource Potential in the Southern Permian Basin** B. Kilhams,P.A. Kukla,S. Mazur,T. McKie,H.F. Mijnlief,K. van Ojik,2018-08-31 The Southern Permian Basin as its name suggests is a

historical heartland for hydrocarbon production from the Palaeozoic Rotliegend interval. However, in this mature basin, the Mesozoic presents further possibilities to offer resource security to NW Europe. Such opportunities include increasing efficiency in the production of discovered hydrocarbons, exploration for further hydrocarbons, both conventional and unconventional, and efficient exploration for and production of geothermal energy. All these potential resources require a grounding in technically sound geoscience via traditional scientific observation and the application of new technologies to unlock their value. The main aim of this volume is to bring together the work of academics and industry workers to consider cross border geoscience including contributions on Poland, Germany, The Netherlands, the United Kingdom and adjacent areas. The work presented intends to contribute to the development and discovery of further Mesozoic energy resources across the basin.

**Nanotechnology, Food Security and Water Treatment** K M Gothandam, Shivendu Ranjan, Nandita Dasgupta, Chidambaram Ramalingam, Eric Lichtfouse, 2018-01-08

This book reviews advanced nanotechnology in food, health, water, and agriculture. In food, nanobiosensors display an unprecedented efficiency for the detection of allergens, genetically modified organisms, and pathogens. In agriculture, nanofertilisers improve plant nutrition by releasing nutrients slowly and steadily. Nanomaterials synthesised using biomass, such as fungi, are further found remarkable to clean waters polluted by heavy metals. However, as newly introduced materials in the environment, nanoparticles may exhibit toxic effects which are reviewed in this book. In the context of climate change, methods for water desalinisation are also presented.

Enabling People-Centered Risk Communication for Geohazards

Alessandro Amato, Sally H. Potter, Anna Scolobig, Eric M. Thompson, 2024-07-18

In the field of natural hazards, communicating science with the public and stakeholders involves entering the challenging and complex world of hazard and risk communication, the ultimate purpose of which is to reduce the impact of impending hazards on people at risk. According to the Sendai Framework 2015-2030, it is important to strengthen the utilization of media, including social media, traditional media, big data, and mobile phone networks to support national measures for successful disaster risk communication. Sometimes, risk communication has collateral and unexpected side effects that may lead to the adoption of inadequate behaviors. In some instances, this can even result in legal actions being taken against scientists and/or emergency managers. The role of the media should be to facilitate the accurate communication of hazard and risk information, but such communication is often hampered by the fact that journalists have different agendas and priorities than scientists, risk communicators, and emergency managers. This does not always support people in their decision making. Accurate communication of hazard and risk is especially important when decisions have to be made within contexts where uncertainty is very high. This is often the case with geohazards such as earthquakes, tsunamis, volcanic eruptions, and landslides.
