Geothermal Water Management Jochen

Bundschuh, Barbara Tomaszewska, 2018-03-12 Availability of and adequate accessibility to freshwater and energy are two key technological and scientific problems of global significance At the end of the 20th century the deficit of water for human consumption and economic application forced us to focus on rational use of resources Increasing the use of renewable energy sources and improving energy efficiency is a challenge for the 21st century Geothermal energy is heat energy generated and stored in the Earth accumulated in hydrothermal systems or in dry rocks within the Earth's crust in amounts which constitute the energy resources The sustainable management of geothermal energy resources should be geared towards optimization of energy recovery but also towards rational management of water resources since geothermal water serves both as energy carrier and also as valuable raw material Geothermal waters depending on their hydrogeothermal characteristics the lithology of the rocks involved the depth at which the resources occur and the sources of water supply may be characterized by very diverse physicochemical parameters This factor largely determines the technology to be used in their exploitation and the way the geothermal water can be used This book is focused on the effective use of geothermal water and renewable energy for future needs in order to promote modern sustainable and effective management of water resources The research field includes crucial new areas of study an improvement in the management of freshwater resources through the use of residual geothermal water a review of the technologies available in the field of geothermal water treatment for its re use for energetic purposes and freshwater production and the development of balneotherapy The book is aimed at professionals academics and decision makers worldwide water sector representatives and administrators business enterprises specializing in renewable energy management and water treatment working in the areas of geothermal energy usage water resources water supply and energy planning This book has the potential to become a standard text used by educational institutions and research development establishments involved in the geothermal water management

Fast 2D Solution-state NMR

Jean-Nicolas Dumez, Patrick Giraudeau, 2023-05-17 Written by active investigators in the field this book describes state of the art methods that can accelerate the acquisition of 2D NMR spectra in solution state NMR The acquisition of fast multi dimensional NMR data has motivated numerous ground breaking developments in NMR pulse sequences and associated data processing methods These in turn have revolutionized the way 2D NMR acquisitions are performed at the same time

broadening the scope of applications of 2D NMR The first part of the book provides an in depth description of the concepts and implementation of major fast 2D NMR methods The second part follows with illustrations of how such methods can be used in applications that require the acquisition of fast 2D NMR spectra from reaction monitoring to hyperpolarization including applications to a broad variety of samples and experimental conditions Appealing to readers from both the methodology and applications communities this title will fill a gap in the market for a book focused on small molecule NMR and researchers from both academia and industry will find a rich plethora of knowledge

Membrane Technology Enhancement for Environmental Protection and Sustainable Industrial Growth Zhien Zhang, Wenxiang

Zhang, Mohamed Mehdi Chehimi, 2020-12-14 This book presents a detailed discussion of the fundamentals and practical applications of membrane technology enhancement in a range of industrial processes energy recovery and resource recycling To date most books on the applications of membrane technology have mainly focused on gas pollution removal or industrial wastewater treatment In contrast the enhancement of various membrane processes in the areas of energy and the environment has remained largely overlooked This book highlights recent works and industrial products using membrane technology while also discussing experiments and modeling studies on the membrane enhancement process

Nanoscale VLSI Rohit Dhiman, Rajeevan Chandel, 2020-10-03 This book describes methodologies in the design of VLSI devices circuits and their applications at nanoscale levels The book begins with the discussion on the dominant role of power dissipation in highly scaled devices The 15 Chapters of the book are classified under four sections that cover design modeling and simulation of electronic magnetic and compound semiconductors for their applications in VLSI devices circuits and systems This comprehensive volume eloquently presents the design methodologies for ultra low power VLSI design potential post CMOS devices and their applications from the architectural and system perspectives The book shall serve as an invaluable reference book for the graduate students Ph D M S M Tech Scholars researchers and practicing engineers working in the frontier areas of nanoscale VLSI design

delivering library services to patrons and ensuring that information resources are disseminated efficiently Digital Libraries and Institutional Repositories Breakthroughs in Research and Practice addresses new methods practices concepts and techniques as well as contemporary challenges and issues for libraries and university repositories that can be accessed electronically It also addresses the problems of usability and search optimization in digital libraries Highlighting a range of topics such as content management resource sharing and library technologies this publication is an ideal reference source for librarians IT technicians academicians researchers and students in fields that include library science knowledge management and information retrieval

Growth and Ecosystem Services of Urban Trees Thomas Rötzer,2019-10-23

Numerous studies indicate an accelerated growth of forest trees induced by ongoing climate change Similar trends were recently found for urban trees in major cities worldwide Studies frequently report about substantial effects of climate change and the urban heat island effect UHI on plant growth The combined effects of increasing temperatures changing precipitation patterns and extended growing season lengths in addition to increasing nitrogen deposition and higher CO₂ concentrations can increase but also reduce plant growth Closely related to this the multiple functions and services provided by urban trees may be modified Urban trees generate numerous ecosystem services including carbon storage mitigation of the heat island effect reduction of rainwater runoff pollutant filtering recreation effects shading and cooling The quantity of the ecosystem services is often closely associated with the species structure age and size of the tree as well as with a tree's vitality Therefore greening cities and particularly planting trees seems to be an effective option to mitigate climate change and the UHI The focus of this Special Issue is to underline the importance of trees as part of the urban green areas for major cities in all climate zones Empirical as well as modeling studies of urban tree growth and their services and disservices in cities worldwide are included Articles about the dynamics structures and functions of urban trees as well as the influence of climate and climate change on urban tree growth urban species composition carbon storage and biodiversity are also discussed

Membrane-based Hybrid Processes for Wastewater Treatment Maulin P. Shah,Susana

Rodriguez-Couto,2021-05-27 Membrane Based Hybrid Processes for Wastewater Treatment analyzes and discusses the potential of membrane based hybrid processes for the treatment of complex industrial wastewater the recovery of valuable compounds and water reutilization In addition recent and future trends in membrane technology are highlighted Industrial wastewater contains a large variety of compounds such as heavy metals salts and nutrients which makes its treatment challenging Thus the use of conventional water treatment methods is not always effective Membrane based hybrid processes have emerged as a promising technology to treat complex industrial wastewater Discusses the properties mechanisms advantages limitations and promising solutions of different types of membrane technologies Addresses the optimization of process parameters Describes the performance of different membranes Presents the potential of Nanotechnology to improve the treatment efficiency of wastewater treatment plants WWTPs Covers the application of membrane and membrane based
