Pieters,1921 Alsike clover is most at home in northern latitudes or at high altitudes It thrives best in a cool moist climate In the Ohio Valley alsike clover is especially adapted to low wet fertile land On such land it will yield heavy crops of first class hay and will make more than one crop in a season This crop will grow on sour land on which red clover will not thrive Where it is not possible to apply lime and so insure a stand of red clover alsike clover may be used Mixed with red clover on uplands alsike clover insures a stand on spots where red clover does not catch Alsike clover is used mostly in mixtures with timothy or other grasses In such mixtures it improves the hay and increases the yield The grasses serve to support the clover and make it easier to cut and cure Alsike clover will endure overflow that would kill most crops It has been know to grow a year in water soaked and water covered soil and make a heavy growth In the South it is recommended for creek bottoms and other wet lands It is a good clover to seed in swales or on wet natural meadows It volunteers readily and ill spread in such places Its disadvantages are 1 On uplands alsike clover grows short and does not make a mass of growth equal to that of red clover 2 Alsike clover makes no second crop except on low rich land 3 On uplands the pasturage after cutting for hay or a seed crop is too small to be useful 4 There appears to be some danger to horses and mules of a little known disease said toe result from eating alsike clover P 2 *Farmers Bulletins* ,1921 *FARMER'S BULLETINS* John L.
