Víctor M. Whizar-Lugo, José Ramón Saucillo-Osuna, Guillermo Castorena-Arellano, 2022-06-08 Regional anesthesia has progressively evolved and currently occupies a predominant place in our daily practice The development of skills for the safe practice of regional anesthesia requires in depth knowledge of anatomy physiology pharmacology and the pathology of each patient candidate to receive some type of regional block as well as special and prolonged training beyond residence particularly in this era of the COVID 19 pandemic during which the training of thousands of anesthesiology residents has been impaired Undoubtedly the benefits of regional anesthesia techniques are enormous as are their complications Countless guidelines for regional anesthesia have been described based on the classic anatomical recommendations the search for paresthesias neurostimulation and medical images The introduction of ultrasound guidance and the rational use of local anesthetics and their adjuvants have favorably revolutionized regional anesthesia making it safer and more effective This book addresses several contemporary topics in regional anesthesia in a variety of interesting clinical settings with practical importance

New Trends in Regional Analgesia and Anesthesia Shun Ming Chan,Jui-An Lin,Po-Kai Wang,2023-08-28 Regional anesthesia and acute pain medicine can add significant non monetary value to a surgical practice and healthcare system in terms of pain relief reduced incidence of anesthetic and opioid related side effects and faster recovery Advances in ultrasonic guided regional anesthesia and analgesia have given clinicians the opportunity to apply new approaches to easily block peripheral nerves As a result improvements in outcomes such as analgesia quality early rehabilitation and patient satisfaction were noted The use of ultrasound results in faster

sensory blocking shorter performance time fewer vascular punctures and needle passages The practice of regional anesthesia has rapidly progressed in recent years with the application of ultrasound which has resulted in a significant improvement in nervous block quality and patient satisfaction Regional anesthesia has always had a role to play in minimizing peri operative opioid requirements but it should no longer be seen as merely an alternative to general anesthesia rather a complement to an overall multimodal anesthetic strategy

Nerve Blocks Peter Marhofer,2008 Ultrasonographic guidance for regional anaesthetic blocks is an innovative technique that allows for the direct visualization of nerves adjacent structures and the position of the needle as well as for the precise observation of the spread of local anaesthetic The advantages of the technique allow for the exact administration of moderate volumes of local anaesthetic and for the avoidance of complications Ultrasound guidance potentially represents a significant step forward in the field of regional anaesthesia and is certain to become the gold standard technique for the administration of regional blocks in future Written by Professor Peter Marhofer and other members of the Austrian Regional Anaesthesia Group who have been instrumental in pioneering ultrasound guided regional anaesthesia techniques and introducing them

into clinical practice over the past 15 years this handbook summarizes the basics of ultrasound technology and provides an overview of the most recent techniques in blocking peripheral nerve structures The book will focus on the use of ultrasonography for adult peripheral regional anaesthesia in daily clinical practice and will become required reading for anaesthesiologists and pain specialists with an interest in regional anaesthesia
