Irwin,1994

When Poe invented the analytic detective genre in the 1840s with the three Dupin stories his underlying project was to examine the very nature of self consciousness But the tradition of detective fiction these stories inspired would draw on only the most superficial aspects of his work One hundred years after Poe however Borges would reinterpret the genre with three detective stories of his own and revive Poe s original ambitious intention to analyze the analytic power In The Mystery to a Solution John Irwin brilliantly examines the deeper significance of the genre Poe created and the meaning of Borges s efforts to double its origin Using a methodology that combines history literary history and practical and speculative criticism Irwin

pursues the issues underlying the detective genre into areas as various as the history of mathematics classical mythology the double mirror structure of self consciousness handedness the anthropology of Evans and Frazer the structure of chess automata the mind body problem the etymology of labyrinth and scores of other topics Irwin honors the aesthetic impact of the genre he discusses by mirroring in his study the dynamics of a detective story the uncovering of mysteries the accumulation of evidence the tracing of clues and the final solution that ties it all together

LOST Opportunities Bronwyn Bevan, Philip Bell, Reed Stevens, Aria Razfar, 2012-07-26 Learning in informal settings is attracting growing attention from policymakers and researchers yet there remains at the moment a dearth of literature on the topic Thus this volume which examines how science and mathematics are experienced in everyday and out of school time OST settings makes an important contribution to the field of the learning sciences Conducting research on OST learning requires us to broaden and deepen our conceptions of learning as well as to better identify the unique and common qualities of different learning settings We must also find better ways to analyze the interplay between OST and school based learning In this volume scholars develop theoretical structures that are useful not only for understanding learning processes but also for helping to create and support new opportunities for learning whether they are in or out of school or bridging a range of settings The chapters in this volume include studies of everyday and situated processes that facilitate science and mathematics learning They also feature new theoretical and empirical frameworks for studying learning pathways that span both in and out of school time and

settings Contributors also examine structured OST programs in which everyday and situated modes of learning are leveraged in support of more disciplined practices and conceptions of science and mathematics Fortifying much of this work is a leading focus on educational equity a desire to foster more socially supportive and intellectually engaging science and mathematics learning opportunities for youth from historically non dominant communities Full of compelling examples and revealing analysis this book is a vital addition to the literature on a subject with a fast rising profile **Bowker's Complete Video Directory** ,2000 **Catalog of audiovisual productions** United States.
