

Chapter 11 Section Review Answer Key

Section Review 11-1

1. Mendel's principle of dominance states that some alleles are dominant and others are recessive. 2. A trait controlled by a dominant allele will be produced if there are two dominant alleles present or one dominant allele and one recessive allele. 3. A trait controlled by a recessive allele will be produced only when two recessive alleles are present. 4. Segregation is the process during gamete formation in which the two alleles are separated from each other so that each gamete carries only a single copy of each gene. With the pea plants, each F₁ generation plant produces two types of gametes—for example, those with the allele for tallness and those with the allele for shortness. 5. True-breeding plants allowed Mendel to pinpoint the cause of variation in traits because he could control which plants bred. Without true-breeding plants, Mendel would not have been able to draw his conclusions because there would have been too many variables. 6. Cross-pollination is the process of one plant fertilizing another, while self-pollination occurs when a plant fertilizes itself. 7. 225 plants will show the trait controlled by the recessive allele. 8. The trait controlled by the recessive allele would not have been produced in the resulting F₂ generation. Both F₁ generation plants need to have *rr* allele combination for the trait controlled by the recessive allele to be produced in one of the F₂ generation plants.

Section Review 11-2

1. Probability is the likelihood that a particular event will occur. The principles of probability can be used to predict the outcomes of genetic crosses. 2. Punnett squares are used to predict and compare the genetic variations that will result from a cross. 3. The seed color controlled by the dominant allele has a 50% probability of being produced and the seed color controlled by the recessive allele has a 50% probability of being produced. Students should have 25% and *Rr* in the upper and lower left boxes and 25% and *rr* in the upper and lower right boxes of their Punnett square. 4. Homozygous plants have two identical alleles for a particular trait, *TT* or *rr*. In contrast, heterozygous plants have two different alleles for a particular trait, *Tt*. 5. *Ff* and *FF* are different genotypes, but both combinations will produce the same phenotype, the trait controlled by the dominant *F* allele. 6. *TT* 25% 7. *Tt* 25% 8. *Tt* 25% 9. *rr* 25%

Section Review 11-3

1. segregate 2. multiple alleles, multiple genes 3. b 4. c 5. d 6. a 7. See punnet square 8. In incomplete dominance, the heterozygous phenotype is somewhere in between the two homozygous phenotypes. In codominance, the heterozygous phenotype shows both traits.

9. Polygenic traits have more variation in phenotypes because different combinations of alleles for these genes produce many different phenotypes. 10. Morgan chose fruit flies because fruit flies are easy to keep in the lab and they reproduce quickly, producing a great number of offspring.

Section Review 11-4

1. 7 2. 5 3. 10 4. 1 5. 8 6. 2 7. 6 8. 4 9. 9 10. 3 11. Mitosis produces two cells. Meiosis produces four cells. 12. Cells resulting from mitosis have a diploid number of chromosomes and are genetically identical to each other and to the original parent cell. Cells resulting from meiosis have a haploid number of chromosomes and are genetically different from each other and the original parent cell. 13. Both products of meiosis I and II are haploid cells. Two cells result from meiosis I, and four cells result from meiosis II. 14. Gamete formation in either sex is a result of meiosis. In males, the four cells resulting from meiosis usually all become gametes. In females, however, the cytoplasm is not divided evenly, so that only one of the four cells becomes a gamete. The other cells become polar bodies, which are not used in reproduction. 15. Each daughter cell would contain 14 chromosomes.

11.3 #7 answer

FFJj x FfJj

	<i>FJ</i>	<i>Fj</i>	<i>fJ</i>	<i>fj</i>
<i>FJ</i>	<i>FFJJ</i>	<i>FFJj</i>	<i>FfJJ</i>	<i>FfJj</i>
<i>Fj</i>	<i>FFJj</i>	<i>FFjj</i>	<i>FfJj</i>	<i>Ffjj</i>
<i>fJ</i>	<i>FfJJ</i>	<i>FfJj</i>	<i>ffJJ</i>	<i>ffJj</i>
<i>fj</i>	<i>FfJj</i>	<i>Ffjj</i>	<i>ffJj</i>	<i>ffjj</i>

Chapter Vocabulary Review

1. i 2. c 3. d 4. g 5. j 6. f 7. a 8. b 9. e 10. b 11. true-breeding 12. phenotype, genotypes 13. independent assortment 14. incomplete dominance, codominance 15. Crossing-over 16. b 17. a 18. d 19. c 20. c 21. b 22. d 23. a 24. b 25. d

Graphic Organizer

1. Production of gametes for sexual reproduction 2. Only in certain cells of the reproductive system 3. Two 4. None 5. Diploid to haploid 6. Eight—four in Meiosis I and four in Meiosis II. 7. Two 8. None

Foundations of College Chemistry, Alternate Morris Hein,Susan Arena,2010-01-26 Learning the fundamentals of chemistry can be a difficult task to undertake for health professionals For over 35 years this book has helped them master the chemistry skills they need to succeed It provides them with clear and logical explanations of chemical concepts and problem solving They ll learn how to apply concepts with the help of worked out examples In addition Chemistry in Action features and conceptual questions checks brings together the understanding of chemistry and relates chemistry to things health professionals experience on a regular basis Shaping Learners'

Pronunciation James Dean Brown,Dustin Crowther,2022-09-30 A straightforward entry to understanding crucial components of phonological literacy this essential text explains the theoretical and practical rationale for teaching connected speech CS and offers useful pedagogical applications Brown and Crowther describe the basic phonemes including consonants vowels and diphthongs of spoken North American English and examine word stress utterance stress and timing as they are related to CS With accessible non technical language the authors show how phoneme variations simple transitions dropping sounds inserting sounds and changing sounds operate and how CS is integral to English language teaching especially for developing non native users oral English communicative ability Each chapter features explicit discussions of pedagogical ideas targeting L2 learners further resources and CS oriented exercises that are accessible and easy to implement for L2 teachers These exercises are accompanied when relevant with recorded audio examples of CS production at www.routledge.com

9780367697570 **Applying Molecular and Materials Modeling** Phillip R. Westmoreland,Peter A. Kollman,Anne M.

Chaka, Peter T. Cummings, Keiji Morokuma, Matthew Neurock, Ellen B. Stechel, Priya Vashishta, 2013-04-17 Computational molecular and materials modeling has emerged to deliver solid technological impacts in the chemical pharmaceutical and materials industries It is not the all predictive science fiction that discouraged early adopters in the 1980s Rather it is proving a valuable aid to designing and developing new products and processes People create not computers and these tools give them qualitative relations and quantitative properties that they need to make creative decisions With detailed analysis and examples from around the world Applying Molecular and Materials Modeling describes the science applications and infrastructures that have proven successful Computational quantum chemistry molecular simulations informatics desktop graphics and high performance computing all play important roles At the same time the best technology requires the right practitioners the right organizational structures and most of all a clearly understood blend of imagination and realism that propels technological advances This book is itself a powerful tool to help scientists engineers and managers understand and take advantage of these advances
