the National Advisory Committee for Aeronautics which had been formed in 1915 The NASA Operations Manual tells the story of America's civilian space agency the facilities it operates where they are and what they do It explains how much NASA costs the American taxpayer and looks at what it returns to the taxpayer in benefits to the economy NASA has forged a niche in modern history that extends beyond the realisation of age old dreams to leave Earth and explore the heavens it has become a synonym for achievement performance and greatness in setting goals and achieving them in failing and learning how to recover in connecting people around the world with international programmes to explore our solar system and live our ambitions and in improving the lives of people everywhere through its inventions discoveries its technology and its engineering Sixty years after NASA took hold of the reins of US civilian space programmes the agency has a bold vision for great and ambitious goals taking humans back to the Moon and on to Mars perhaps visiting an asteroid or setting up an interplanetary transport system on the way And all the time providing inspiration for a new generation With more than 300 photographs line drawings and charts this book tours the United States describing the centres of excellence and the facilities where rockets are tested satellites are built and humans prepare for space With summary review of research laboratories test rigs experimental platforms and engineering facilities this book describes the 60 years of NASA as it has evolved through changing requirements and expanding capabilities building on the past and preparing for a bold future *America's Space Shuttle* World Spaceflight News Staff,2001 *America's Space Shuttle* World Spaceflight News Staff,2001 **America's Space Shuttle** World Spaceflight News,National Aeronautics and Space Administration (NASA),2017-08-29 This unique and historic document is the Space Shuttle's Main Propulsion System MPS Operations User's Guide The official NASA astronaut training manuals comprised a major part of the formal flight crew training process and were used by flight controllers as well These internal NASA manuals were produced by the Mission Operations Directorate Space Flight Training Division branch at NASA's Johnson Space Center The manuals and workbooks are extremely detailed and comprehensive and are designed for self study A full listing of all acronyms and abbreviations used in the text is included They provide a superb way to learn about Shuttle systems hardware and operational procedures Special emphasis on crew interaction with the displays controls and hardware is included This MPS OPS User's Guide is a unique document because it is written for users of the MPS system This guide consolidates all technical documentation required to fully prepare a crewmember to operate the MPS system under nominal conditions from pre launch to landing The target audiences for this user's guide are 1 Astronauts 2 Space Flight Training Division Instructors who train the astronauts 3 Flight Controllers who desire a crew member perspective of the system This User's Guide is divided into three sections 1 MPS Subsystems 2 Crew Tasks 3 Nominal FDF procedures *User's Manual for Space-shuttle Computer Programs* ,1976 *Nasa Space Shuttle Crew Escape Systems Handbook* United Space Alliance,2012-05 Prepared for NASA by contractor United Space Alliance in 2005 this Space Shuttle Crew Escape System Handbook details the equipment systems and procedures that would have been used in the event of an

emergency during launch Designed for use by astronauts instructors and ground personnel the text describes and explains the crew worn equipment and orbiter hardware emergency escape modes and crew duties and responses during egress It includes a discussion of the Advanced Crew Escape Suit ACES helmet parachute and harness and survival gear It also details hatch opening procedures the escape pole slide system Sky Genie slidewire basket system the Window 8 escape panel special seat features and more A short supplement also provides information about Shuttle Transoceanic Aboard Landing sites Richly illustrated with numerous diagrams and photos this book provides fascinating insights into rarely discussed aspects of the Space Shuttle program and astronaut training **America's Space Shuttle** World Spaceflight News,National Aeronautics and Space Administration (NASA),2017-05-04 This unique and historic document provides extraordinary detail about the Space Shuttle s Return to Launch Site RTLS abort procedure The official NASA astronaut training manuals comprised a major part of the formal flight crew training process and were used by flight controllers as well These internal NASA manuals were produced by the Mission Operations Directorate Space Flight Training Division branch at NASA s Johnson Space Center The manuals and workbooks are extremely detailed and comprehensive and are designed for self study A full listing of all acronyms and abbreviations used in the text is included They provide a superb way to learn about Shuttle systems hardware and operational procedures Special emphasis on crew interaction with the displays controls and hardware is included If an engine fails during the first 4 minutes of ascent the shuttle cannot achieve orbit For the first 3 minutes or so of ascent it cannot even reach a TAL The only runway near enough to be reached is one near the launch site In order to reach this runway the shuttle must literally reverse course and fly back the way it came The turn to reverse course is called powered pitcharound PPA and the timing of PPA is critically important Since the orbiter is powerless once the main engines are shut down these engines must be shut down when the orbiter has enough speed and altitude to glide to the runway Also in order to safely separate the orbiter from the ET the ET should have no more than 2 percent propellant remaining More propellant might slosh around and cause the tank to lurch and collide with the orbiter Therefore the shuttle must turn back toward the launch site at the exact instant that will allow it to arrive at MECO with the right amounts of speed altitude and propellant If the RTLS is declared before the time of PPA the shuttle has to perform what is called fuel wasting This means pointing the shuttle more vertical called lofting to minimize loss of altitude while still flying away from the launch site and runway This continues until the shuttle must execute PPA and turn back toward the launch site From this point on the shuttle thrusts back toward the runway until it reaches MECO conditions These conditions are specified as 2 percent propellant remaining with the right speed direction and altitude to glide to a landing *America's Space Shuttle* Lyndon B.
