Personality Assessment in America Edwin I. Megargee, Charles D. Spielberger, 2019-06-07 Whereas most psychology books discuss current or future trends this one focuses on the past It consists of a collection of important and historically significant writings by a select group of men and women who over the past 50 years were honored by their colleagues for their distinguished contributions to the field of personality assessment Published from 1939 through 1989 most of the papers were SPA Presidential addresses or presentations by the recipients of the Society's Distinguished Contributions Award Taken

as a whole they provide a unique perspective on the evolution of personality assessment in America from the perspective of those who have made important contributions to that history The writings are not merely of historical interest but intrinsically important scientific contributions some of which were in danger of being lost or forgotten The editors feel it is important to preserve and pass on this valuable legacy for the education and edification of later generations It is not only its historical perspective that makes this book unique This book provides first hand discussions of crucial issues in personality assessment written by the gifted men and women who were actually grappling with these problems at the time without knowing what the outcomes would be Readers will find that these papers provide insights not only into the conflicts and controversies but also into the ideas attitudes and emotions of the men and women who took part in them *Handbook on the Neuropsychology of Aging and Dementia* Lisa D. Ravdin, Heather L. Katzen, 2012-09-14 With the aging of the baby boomers and medical advances that promote longevity older adults are rapidly becoming the fastest growing segment of the population As the population ages so does the incidence of age related disorders Many predict that 15% 20% of the baby boomer generation will develop some form of cognitive decline over the course of their lifetime with estimates escalating to up to 50% in those achieving advanced age Although much attention has been directed at Alzheimer s disease the most common form of dementia it is estimated that nearly one third of those cases of cognitive decline result from other neuropathological mechanisms In fact many patients diagnosed with Alzheimer s disease likely have co morbid disorders that can also influence cognition i e vascular cognitive impairment suggesting mixed dementias are grossly under diagnosed The Clinical Handbook on the Neuropsychology of Aging and Dementia is a unique work that provides clinicians with expert guidance and a hands on approach to neuropsychological practice with older adults The book will be divided into two sections the first addressing special considerations for the evaluation of older adults and the second half focusing on common referral questions likely to be encountered when working with this age group The authors of the chapters are experts and are recognized by their peers as opinion leaders in their chosen chapter topics The field of neuropsychology has played a critical role in developing methods for early identification of late life cognitive disorders as well as the differential diagnosis of dementia Neuropsychological assessment provides valuable clinical information regarding the nature and severity of cognitive symptoms associated with dementia Each chapter will reinforce the notion that neuropsychological measures provide the clinician with sensitive tools to differentiate normal age related cognitive decline from disease associated impairment aid in differential diagnosis of cognitive dysfunction in older adults as well as identify cognitive deficits most likely to translate into functional impairments in everyday life **Clinical Trials in Psychopharmacology** Marc Hertzman, Lawrence Adler, 2010-03-16 Although clinical trials were virtually unheard of in psychiatry for many years they are now the gold standard for judging whether drugs are safe and useful But should they be What is the true status of clinical trials Even when they ostensibly demonstrate a benefit of a certain treatment the strict patient selection criteria poor

compliance and high drop out rate leave the conclusions open to question Are the new treatments really better or more cost effective than the old Do they have fewer side effects In this book the authors take a critical look at recent developments and present a series of trenchant and challenging observations Section I examines the significant changes in law and the regulatory environment that have occurred during the past ten years Has fossilization handicapped the US Food and Drug Administration in promoting treatment advances How can the plethora of findings be regulated This is particularly pertinent in genomic studies and there are two chapters addressing the impact of genomics on psychiatric research This section also addresses the role of women in drug trials a group long excluded but now demanding a part for without testing how can optimal treatments be devised The next two Sections highlight clinical trials in the major areas of psychiatric pharmacological treatment including Mood Disorders especially Bipolar Anxiety Disorders and addictions Chapters on pharmacological treatments for Eating Disorders Attention Deficit Disorder Autism and Asperger s Syndrome and Impulse Control Disorder represent the latest thinking on these subjects The final Section contains a consummate example of out of the Western box thinking namely consideration of herbal medicines used by a large number of patients with or without medical supervision We conclude with a close look at the problem of side effects then selected thoughts about methodology Clearly written the text provides immediate access to new developments across the spectrum of drug testing Clinical Trials in Psychopharmacology A Better Brain is provocative reading for psychiatrists pharmacologists and all those interested in improved drug treatments for patients with mental illness Raises questions about the conduct of trials and the credibility of their outcomes that are relevant not just in psychiatry but all areas of medicine Discusses the ethical problems in assessing outcomes in humans including children
