What kind of simulation is this? (What do you do with it?)

Answer: A virtual lab simulation.

What is the purpose of this simulation? (What do you learn from it?)

Answer: To learn about the states of matter and how they change.

States of Matter

There are three states of matter: solid, liquid, and gas. Each state has different properties. In this simulation, you can observe how matter changes between these states by adding or removing heat.

Simulation Controls

On the right side of the simulation, there are controls for adding or removing heat. The 'Add Heat' button is represented by a red flame icon, and the 'Remove Heat' button is represented by a blue ice cube icon. You can also adjust the amount of heat added or removed using a slider.

Observations

As you add heat, the matter transitions from solid to liquid and then to gas. As you remove heat, it transitions from gas to liquid and then back to solid. The simulation shows the molecular structure of the matter in each state, allowing you to see how the particles are arranged and how they move.
