Student Exploration: Photosynthesis Lab

Vocabulary: carbon dioxide, chlorophyll, glucose, limiting factor, nanometer, photosynthesis, wavelength

Prior Knowledge Questions (Do these BEFORE using the Gizmo.)

- To survive, what gas do we need to breathe in?

oxygen

Where is this gas produced? oxygen gas is produced in plants through photosynthesis where oxygen is a waste product

Gizmo Warm-up

During **photosynthesis**, plants use the energy of light to produce **glucose** ($C_6H_{12}O_6$) from **carbon dioxide** (CO_2) and water (H_2O). Glucose is a simple sugar that plants use for energy and as a building block for larger molecules.

A by-product of photosynthesis is oxygen. Plants use some of the oxygen they produce, but most of it is released. In the *Photosynthesis Lab* Gizmo, you can monitor the rate of photosynthesis by measuring oxygen production.

1. Observe the left pane closely. What do you think the bubbles are? I think the bubbles on the left pane are bubbles of oxygen gas.

2. Select the BAR CHART tab. On the graph, notice the **Oxygen production** bar. Move the **Light intensity** slider back and forth. How does light intensity affect oxygen production?

As the light intensity increases, the oxygen production also increases.

Prospects and Applications for Plant-Associated Microbes, A laboratory manual Seppo Sorvari,Anna Maria
Pirttilä,2014-12-15 Research on the microbial colonization of the aerial and subterranean tissues of plants has shown an
extensive scale of interactions between the hosts and a range of microbes including bacteria and fungi Intercellular spaces
vascular systems and even single cells can be inhabited by these endophytic microbes Of the bacterial endophytes only a
small percentage is harmful to the plant most are neutral opportunistic or beneficial These plant based bacteria can have
various important functions throughout the life cycle of the plant some promote plant growth and development others protect
the plant from diseases This ability to be able to protect plants from diseases has catalyzed numerous laboratories to search
for new bacteria that could be utilized instead of the traditional plant protective agents Because two or more interacting
organisms are involved research and the eventual application of suitable bio controlling microbes are challenging and often
require specific skills and equipment The purpose of this book is to provide a comprehensive review for those who are
interested in the research and biotechnological applications of plant associated bacteria It also provides a compilation of
