Radiological Functional Analysis of the Vascular System Friedrich H.W. Heuck, 2012-12-06 Scientists and engineers have been involved in medical radiology from the very beginning At times advances in this field occur at a tremendously fast pace Developments in radiological diagnostics have technologically and medically speaking focused on morphology At present computer aided tomography CAT is at a high point in development medical application and validation The preconditions for this success were rapid advances in electronics and computer technology in hardware and in software and an unexpected cost reduction in these fields the co-operation of various scientific disciplines was also essential Functional radiological diagnosis has been neglected in part owing to the emphasis on morphology but alone the synthesis of morphology and function promises further advances Apart from the limited capabilities of ultrasonic techniques there is no way other than using X-rays to carry out functional studies of organs and their systems through an intact body surface It is frequently necessary to do further processing and evaluation of image series which have been recorded from the morphological viewpoint This further picture processing may be of selected points pixels in the image of certain regions of interest ROI or of the overall picture For the measurement of rapid phenomena such as the blood flow in the main arteries high image frame rates are required and at the moment these can only be achieved with cinematographic techniques For slower processes other techniques such as videography have some advantages
