A Stargazing Program for Beginners Jamie Carter,2015-11-20 Sets out a simple month by month program to reveal all of

the night sky's biggest and most beautiful secrets in just one year and with only a few hours of stargazing each month. By investing just an hour a week and 50 in binoculars it's possible to learn a few simple techniques and quickly gain a real insight into the night sky's ever-changing patterns and what they tell us about Earth, the seasons, and ourselves. Searching more for a learned appreciation of nature and our exact place within the cosmos than academic scientific knowledge, science and travel writer Jamie Carter takes the reader on a 12-month tour of the night sky's incredible annual rhythms that say so much about Earth. During the journey he learns about the celestial mechanics at work in the skies above that are to the beginner almost beyond belief. As well as the vital constellations and clusters and the weird and wonderful nebulae he searches out dark sky destinations across the globe that help increase knowledge and give a new perspective on familiar night sky sights. On the journey he witnesses a solar eclipse and grapples with star charts, binoculars, smartphone apps, telescopes, spots satellites, and attempts basic astro photography. By year's end the reader will be able to glance at the night sky from anywhere on the planet and tell what direction he or she is facing, what time it is, where all the planets are, and even where the Galactic Center Point is.

Stars Adam Ford, 2015-09-01 Stargazing is a lovely cross-generational activity who wouldn't be fascinated by the sheer size of the universe. Stars offers a straightforward guide to what we know and how we know it, plus a range of activities ranging from star charts showing the stars you'll see in different seasons and in different places to Star Bingo (match the stars you see to those on the card) and a design your own alien sticker game (imagine what life might be like on other planets far far away). Clear, easy-to-follow text alongside magically imaginative illustration is guaranteed to make an evening's backyard stargazing a family favorite all year round.

Star Texts Jeremy G. Butler, 1991 A collection of previously published works on performance and stardom, examining the relationship between genre and performance, the position of the star within ideology, the construction of a semiotics of performance and stardom, the function of the actor within experimental or independent cinema, and the distinction between performance and everyday behavior.
