Machine Drives Claiton Moro Franchi, 2019-01-14 This work was developed based on the author's experience of more than 10 years working in research and industry in the areas of electrical drives and industrial automation. Seeking the connection between theory and its applications, the author presents a detailed conceptual description with lots of figures and illustrative examples that harmonize the theoretical approach with the practice. Composed of eleven chapters and three appendices, the book describes in a dynamic and didactic way the fundamental concepts related to the drives of electric machines. At the end of each chapter is a set of exercises to ease the fixation of the presented content. *Protocol Engineering* Hartmut König, 2012-10-08 Communication protocols form the operational basis of computer networks and telecommunication systems. They are behavior conventions that describe how communication systems interact with each other, defining the temporal order of the interactions and the formats of the data units exchanged; essentially, they determine the efficiency and reliability of computer networks. Protocol Engineering is an important discipline covering the design, validation, and implementation of communication protocols. Part I of this book is devoted to the fundamentals of communication protocols, describing their working principles and implicitly also those of computer networks. The author introduces the concepts of service protocol layer and layered architecture and introduces the main elements required in the description of protocols using a model language. He then presents the most important protocol functions. Part II deals with the description of communication protocols, offering an overview of the various formal methods, the essence of Protocol Engineering. The author introduces the fundamental description methods such as finite state machines, Petri nets, process calculi, and temporal logics that are in part used as semantic models for formal description techniques. He then introduces one representative technique for each of the main description approaches, among others SDL and LOTOS, and surveys the use of UML for describing protocols. Part III covers the protocol life cycle and the most important development stages, presenting the reader with approaches for systematic protocol design with various verification methods, with the main implementation techniques, and with strategies for their testing, in particular with conformance and interoperability tests and the test description language TTCN. The author uses the simple data transfer example protocol XDT (eXample Data Transfer) throughout the book as a reference protocol to exemplify the various description techniques and to demonstrate important validation and implementation approaches. The book is an introduction to communication protocols and their development for undergraduate and graduate students of computer science and communication technology, and it is also a suitable reference for engineers and programmers. Most chapters contain exercises, and the author's accompanying website provides further online material, including a complete formal description of the XDT protocol and an animated simulation visualizing its behavior.

The Enigmatic Realm of **Start Stop Connection Diagram**: Unleashing the Language is Inner Magic

In a fast-paced digital era where connections and knowledge intertwine, the enigmatic realm of language reveals its inherent magic. web moving object detection in wide area motion imagery matlab version moving object detection vehicles for wami images this code is the implementation for our paper detecting and tracking small moving objects in wide area motion imagery wami using convolutional neural networks cnns which has been accepted in 22nd

computer vision with matlab for object detection and tracking - Dec 07 2022

web jan 29 2013 track single objects with the kanade lucas tomasi klt point tracking algorithm perform kalman filtering to predict the location of a moving object implement a motion based multiple object tracking system this webinar assumes some experience with matlab and image processing toolbox we will focus on the computer vision

[motion based multiple object tracking matlab simulink](#) - Aug 15 2023

web the problem of motion based object tracking can be divided into two parts detecting moving objects in each frame associating the detections corresponding to the same object over time the detection of moving objects uses a background subtraction algorithm based on gaussian mixture models

[tracking and motion estimation matlab simulink mathworks](#) - Jul 14 2023

web this toolbox includes motion estimation algorithms such as optical flow block matching and template matching these algorithms create motion vectors which can relate to the whole image blocks arbitrary patches or individual pixels

[detecting and tracking moving objects matlab answers](#) - Apr 30 2022

web jul 10 2015 answers 1 there are many different ways to detect and track moving objects kalman filter does assume either a constant velocity or a constant acceleration motion model however it also assumes system noise which is a way to account for the fact that the actual motion of an object does not exactly fit your model

detection and tracking matlab simulink mathworks - Sep 04 2022

web object tracking consists of assigning a unique id to detected objects and tracking their movement across point cloud frames lidar toolbox includes detection and tracking workflows for vehicles road lanes and curbs

[multiple object tracking tutorial matlab simulink mathworks](#) - Jun 13 2023

web moving object detection and motion based tracking are important components of automated driver assistance systems such as adaptive cruise control automatic emergency braking and autonomous driving you can divide motion based object tracking into two parts detecting moving objects in each frame tracking the moving objects from
