

- (d) Electric field strength due to infinite line charge having linear charge density (λ) coulomb/metre,

$$E = \frac{1}{4\pi\epsilon_0} \frac{2\lambda}{r}$$

- (e) Electric field strength near an infinite thin sheet of charge,

$$E = \frac{\sigma}{2\epsilon_0}$$

- (f) Electric field strength near a conductor $\vec{E} = \frac{\sigma}{\epsilon_0} \hat{n}$, where $\hat{n}$ is a unit vector normal to the surface in the outer direction. Electric field strength inside a conductor $E = 0$.

7. Electric Dipoles:

- (a) Dipole moment $|\vec{p}| = q \cdot 2l$ ($2l$ being the separation from $-q$ to $+q$)

- (b) Torque on a dipole in uniform electric field $\vec{\tau} = \vec{p} \times \vec{E}$

- (c) Potential energy of dipole, $U = -\vec{p} \cdot \vec{E}$, $\vec{E} = -pE \cos \theta$
where θ is the angle between $\vec{p}$ and $\vec{E}$

- (d) Work done in rotating the dipole in uniform electric field from orientation θ_1 to θ_2 is

$$W = U_2 - U_1 = pE(\cos \theta_1 - \cos \theta_2)$$

Work done in rotating the dipole from equilibrium position $\theta = 0$ to orientation θ is

$$W = pE(1 - \cos \theta)$$

- (e) Electric field due to a short dipole,

(i) at axial point $E_{\text{axial}} = \frac{1}{4\pi\epsilon_0} \frac{2p}{r^3}$

(ii) at an equatorial point $E = \frac{1}{4\pi\epsilon_0} \frac{p}{r^3}$

8. Total electric flux, $\phi = \int_s \vec{E} \cdot d\vec{S} = \frac{1}{\epsilon_0} \times$ net charge enclosed by the closed surface.

Static Electricity in Nature and Industry Paul Gordon Guest, 1933

The Process of Learning about Static Electricity and the Role of the Computer Simulator Valerie K. Otero, 2001 The concepts investigated in this study stemmed from two things First a pilot study where we found that the static electricity simulator results coupled with the CPU pedagogical structure provided facilitated the articulation and sharing of ideas in a small group of three students From this we hypothesized that the simulator tools played a role in

knowledge construction and we wanted to find out more about what role it played Second the past ten years of research in mathematics and science education has led to the recognition of the importance of the instructional setting collaboration and cognitive tools in the construction of knowledge A tradition has emerged where researchers have begun to look at the individual s knowledge construction through a different lens than the knowledge that emerges through group interactions From this type of research we can learn about the knowledge construction of the individual and the knowledge construction of the group We can understand how the interactions within the group have influenced the knowledge development of the individual However we cannot learn about how the individual influences the group parameters Repeated interactions between individuals and tools can fundamentally change the social and material setting We need to look at how the social and material setting changes as a result of the individuals interaction with it and how this changing social setting influences the conceptual development of the individual Investigating interdependent interaction between the individual and the social and material setting is the foundation for this work I believe that understanding learning requires more than understanding the individual and understanding the social environment of which he was a part Understanding learning means understanding how the individual changes the social and material setting and how these changes influence the individual This dissertation is devoted to understanding individuals learning the factors that influenced it and further understanding how these factors were determined by the knowledge evolution of the individual

Electrostatic Hazards Günter Luttgens,Norman Wilson,1997-06-19 In the US UK and Europe there is in excess of one notifiable dust or electrostatic explosion every day of the year This clearly makes the hazards associated with the handling of materials subject to either cause or react to electrostatic discharge of vital importance to anyone associated with their handling or industrial bulk use This book provides a comprehensive guide to the dangers of static electricity and how to avoid them It will prove invaluable to safety managers and professionals as well as all personnel involved in the activities concerned in the chemical agricultural pharmaceutical and petrochemical process industries Electrostatic Hazards makes extended use of case studies to illustrate the principles being expounded thereby making it far more open accessible and attractive to the practitioner in industry than the highly theoretical texts which are also available The authors have many years experience in the area behind them including the professional teaching of the content provided here G nter L ttgens is a widely acknowledged consultant who travels Europe providing training to major industrial corporations on this subject whilst Norman Wilson practices what is written here in his professional capacity with the British Textile Technology Group Extended use of case studies to illustrate the principles This makes the book far more open accessible and attractive to the practitioner in industry than the highly theoretical texts also available Authors have many years experience in the area Both authors have been widely published with considerable previous book writing experience
