NASTRAN User's Manual ,1970 *The NASTRAN User's Manual, Level L6.0 Supplement* United States. National Aeronautics and Space Administration,1976 **NATFREQ Users Manual** Wilfred D. Iwan,1984 This manual describes a computer program that has been developed to calculate natural frequencies and mode shapes of taut cables with attached masses and spring mass combinations The equations of motion are solved by an iterative technique allowing accurate calculation even for extremely high mode numbers The approach has the advantages that it is fast accurate and can easily accommodate a variety of system configurations including bodies attached to the cable This document covers the theory used in the development of the code Line by line descriptions of both the input and output data are given and several examples illustrating the use of the program are included Some of the difficulties that may be encountered when running large complex problems are discussed and possible solutions proposed The structure of the program is described in moderate detail The program is written in a style which makes additions or modifications easy to implement Author

Organick,Alexandra I. Forsythe,Robert P. Plummer,2014-05-10 *Programming Language Structures* deals with the structures of programming languages and introduces the reader to five important programming languages Algol Fortran Lisp Snobol and Pascal The fundamental similarities and differences among these languages are discussed A unifying framework is constructed that can be used to study the structure of other languages such as Cobol PL I and APL Several of the tools and methodologies needed to construct large programs are also considered Comprised of 10 chapters this book begins with a summary of the relevant concepts and principles about algorithms flowcharts and computation that a student is expected to know from the first course The discussion then turns to the semantics of procedure and function call as well as argument parameter matching with various kinds of parameters recursion and its relation to tree traversal syntax formalism for context free languages and ALGOL 60 and block structuring Case study programs are presented to reinforce the reader s understanding of ALGOL 60 and Fortran semantics The remaining chapters deal with Lisp Snobol and Pascal This
