

Symbiosis & Species Interactions Keystone Webquest

BIO-B.4.2.2 Describe biotic interactions in an ecosystem (e.g., competition, predation, symbiosis).

When ecologists talk about species interactions, they are talking about how organisms in the same community interact with one another. Most of the interactions between species involve food: **competition** for the same food supply, eating (predation), avoiding being eaten (avoiding predation). These interactions are often brief. There are many cases, however, where two species live in close association for long periods of time. Such associations are called **symbiosis** ("living together"). There are three types of symbiotic relationships: **parasitism**, **commensalism**, and **mutualism**. Use the websites below to learn more about these interactions.
