Smart Metering Applications Nikolaos Efkarpidis, Martin Geidl, Holger Wache, Marco Peter, Marc Adam, 2022-10-03

This book presents a large number of smart metering applications from the points of view of different stakeholders. The applications are clustered with respect to three types of stakeholders: a end customers, b energy service providers and c authorities, research institutions or other organizations. The goal of the book is to examine the implementation potential for each application, considering the interests and benefits for the key stakeholders, main technical and regulatory requirements, as well as limitations and barriers. A business case for each application is created that can provide guidelines to the stakeholders involved in its realization. The book additionally investigates current business models for smart metering applications. A survey on the current techno-economic potential of such applications is conducted based on a questionnaire filled by various stakeholders. The book will be of interest to academic research institutions but also engineers in industry, authorities or other organizations.

Energy Efficiency in Domestic Appliances and Lighting Paolo Bertoldi, 2022-05-18 This book contains peer reviewed papers presented at the 10th International Conference on Energy

Efficiency in Domestic Appliances and Lighting EEDAL 19 held in Jinan China from 6-8 November 2019. Energy efficiency helps to mitigate CO₂ emissions and at the same time increases the security of energy supply. Energy efficiency is recognized as the cleanest, quickest and cheapest energy source. Not only this but energy efficiency brings several additional benefits for society and end users such as lower energy costs, reduced local pollution, better outdoor and indoor air quality, etc. However, in some sectors such as the residential sector, barriers to investments in energy efficiency remain. Legislation adopted in several jurisdictions (EU, Japan, USA, China, India, Australia, Brazil, etc.) helps in removing barriers and fosters investments in energy efficiency. These initiatives complement innovative financing schemes for energy efficiency, the provision of energy services by energy service companies and different types of information programs. At the same time, progress in appliance technologies and in solid state lighting offer high levels of efficiency. LED lighting is an example. As with previous conferences in this series, EEDAL 19 provided a unique forum to discuss and debate the latest developments in energy and environmental impact of households including appliances, lighting, heating and cooling equipment, electronics, smart meters, consumer behavior and policies and programs. EEDAL addressed non-technical issues such as consumer behavior, energy access in developing countries and demand response.
