Sname Guide For Sea Trials:

Handbook of Marine Craft Hydrodynamics and Motion Control Thor I. Fossen, 2011-05-23 The technology of hydrodynamic modeling and marine craft motion control systems has progressed greatly in recent years This timely survey includes the latest tools for analysis and design of advanced guidance navigation and control systems and presents new material on underwater vehicles and surface vessels Each section presents numerous case studies and applications providing a practical understanding of how model based motion control systems are designed Key features include a three part structure covering Modeling of Marine Craft Guidance Navigation and Control Systems and Appendices providing all the supporting theory in a single resource kinematics kinetics hydrostatics seakeeping and maneuvering theory and simulation models for marine craft and environmental forces guidance systems sensor fusion and integrated navigation systems inertial measurement units Kalman filtering and nonlinear observer design for marine craft state of the art methods for feedback control more advanced methods using nonlinear theory enabling the user to compare linear design techniques before a final implementation is made linear and nonlinear stability theory and numerical methods companion website that hosts links to lecture notes and download information for the Marine Systems Simulator MSS which is an open source Matlab Simulink toolbox for marine systems The MSS toolbox includes hydrodynamic models and motion control systems for ships underwater vehicles and floating structures With an appropriate balance between mathematical theory and practical applications academic and industrial researchers working in marine and control engineering aspects of manned and unmanned maritime vehicles will benefit from this comprehensive handbook It is also suitable for final year undergraduates and postgraduates lecturers development officers and practitioners in the areas of rigid body modeling hydrodynamics simulation of marine craft control and estimation theory decision support systems and sensor fusion www.wiley.com/go/fossen_marine

Practical Design of Ships and Mobile Units Marinus Willem Cornelis Oosterveld, S. G. Tan, 1998 These proceedings contain the papers presented at the 7th International Symposium on Practical Design of Ships and Mobile Units The symposium was held at the Congress Centre in The Hague The Netherlands on 20-25 September 1998 The overall aim of PRADS conferences is to advance the design of ships and mobile marine structures through the exchange of knowledge and the promotion of discussions on relevant topics in the fields of naval architecture and marine and offshore engineering Greater international co operation of this kind can help improve design and production methods and so increase the efficiency economy and safety of ships and mobile units The main themes of this symposium are design synthesis production ship hydromechanics ship structures and materials and offshore engineering Some topics which attracted many papers were design loads design for ultimate strength impact of safety and environment grounding and collision resistance and flow seakeeping fatigue considerations and propulsor and propulsion systems Marine Technology and SNAME News, 1993
