A Conceptual History of Chinese -isms Ivo Spira, 2015-05-12 In *A Conceptual History of Chinese Isms* Ivo Spira explores the linguistic and rhetorical development of Chinese isms as well as the key concept zh y

ism itself He argues that the introduction of this concept from Japan in the 1890s inaugurated an Age of Isms in which it served as a conceptual focus for the stereotypical categorization of people and the utopian imagination of the future The book focuses on Chinese isms in the formative period 1895-1925 through a close reading of key primary sources covering linguistic conceptual and rhetorical aspects of their use in ideological reasoning Spira emphasizes the combination of internal traditional and external Western and Japanese factors in the emergence of Chinese isms

Radiation-induced and oxidative DNA damages Antonio Monari, Elise Dumont, Chrysostomos Chatgililoglu, 2015-10-02 DNA stores and passes the genetic information of almost all living organisms Its molecular structure and their intramolecular interactions are particularly suitable to maximize stability against oxidative stress and UV light absorption Yet the protection and repair strategies are still error prone DNA lesions are produced including the most complex and highly mutagenic ones An important threat to DNA stability comes from photosensitization i.e. from the dramatic multiplication of radiation induced defects mediated by the presence of organic or organometallic dyes compared to the direct exposure to UVA radiation Moreover the photo induced production of singlet oxygen generates an extremely high oxidative stress on DNA that in vivo normally results in extended cellular apoptosis

Elucidating the processes leading to DNA damages from the production of a simple radical entity to deleterious lesions as well as the opportunities of repair by devoted enzymes is a cornerstone towards the development of more efficient protection strategies Sensitization and selective production of DNA lesions can also be exploited to induce the selective apoptosis of cancer cells upon exposition to radiation or to oxidative stress for instance in the field of photodynamic therapy The importance and relevance of the field is witnessed by the impressive amount of high level papers dealing with this complex subject and notably tackling the structural elucidation of DNA and DNA drug adducts the mechanisms of formation of DNA lesions including the precise detection of the final lesion products as well as the influence of the lesions on the DNA stability and dynamics and the consequences on the ease of repair Due to the complexity of the field lying at the frontiers between chemistry physics and biology multidisciplinary strategies allying modeling and experience are needed This topic aims at giving an extended overview of the current research in the domain with fundamental contribution from the leading groups in the field of DNA reactivity structural characterization photo chemistry and photo physics as well as repair mechanism It will therefore be a fundamental guide for scientists wanting to address the field of DNA lesion and repair but also more generally for researchers working in rational drug design or in the development of biomarkers and medical imaging techniques
