Smart Graphics Andreas Butz, Brian Fisher, Antonio Krüger, Patrick Olivier, Marc Christie, 2008-08-20 For centuries artists and designers have been creating communicative graphics With the advent of new forms of media the emergence of paradigms such as ubiquitous computing and the rapid evolution of interaction devices there is a continuous cycle of renewal of the technologies and methods to support artists interaction designers and developers Developing new approaches requires an understanding of the fundamentals of perception and cognition as they relate to interaction and communication technologies together with artificial intelligence and computer graphics techniques to automate reasoning and enhance cognition Smart Graphics is in essence an interdisciplinary endeavor and brings together the fields of computer graphics artificial intelligence cognitive science graphic design and new art The International Symposium on Smart Graphics 2008 was held on August 27-29 in Rennes France It was the ninth event in a series which originally started in 2000 as an American Association for Artificial Intelligence Spring Symposium and has taken place every year since then Due to the high quality of the papers submitted this year the Program Committee decided to accept 17 full papers instead of the usual 15-9 short papers and 3 system demonstrations The acceptance rate for full papers was 34% This year's meeting included a discussion as to the nature of the shape content and future of the event Representatives from different communities were invited to give their opinions and the organizing committee would like to warmly

thank them here Such questions as the ongoing viability of the symposium and the consequences of locating Smart Graphics with other larger research events led to interesting debates and have prepared the groundwork for what could be the future of the Smart Graphics conference series

Smart Grid Standards Takuro Sato, Daniel M. Kammen, Bin Duan, Martin Macuha, Zhenyu Zhou, Jun Wu, Muhammad Tariq, Solomon Abebe Asfaw, 2015-02-02 A fully comprehensive introduction to smart grid standards and their applications for developers consumers and service providers The critical role of standards for smart grid has already been realized by world wide governments and industrial organizations There are hundreds of standards for Smart Grid which have been developed in parallel by different organizations It is therefore necessary to arrange those standards in such a way that it is easier for readers to easily understand and select a particular standard according to their requirements

without going into the depth of each standard which often spans from hundreds to thousands of pages. The book will allow people in the smart grid areas and in the related industries to easily understand the fundamental standards of smart grid and quickly find the building block standards they need from hundreds of standards for implementing a smart grid system. The authors highlight the most advanced works and efforts now under way to realize an integrated and interoperable smart grid such as the NIST Framework and Roadmap for Smart Grid Interoperability Standards Release 2.0, the IEC Smart Grid Standardization Roadmap, the ISO/IEC's Smart Grid Standards for Residential Customers, the ZigBee HomePlug's Smart Energy Profile Specification 2.0, IEEE's P2030 Draft Guide for Smart Grid Interoperability of Energy Technology and Information Technology Operation with the Electric Power System (EPS) and End Use Applications and Loads, and the latest joint research project results between the world's two largest economies, US and China. The book enables readers to fully understand the latest achievements and ongoing technical works of smart grid standards and assist industry, utilities, vendors, academia, regulators, and other smart grid stakeholders in future decision making. The book begins with an overview of the smart grid and introduces the opportunities in both developed and developing countries. It then examines the standards for power grid domain of the smart grid including standards for blackout prevention and energy management, smart transmission, advanced distribution management and automation, smart substation automation and condition monitoring. Communication and security standards as a whole are the backbone of smart grid and their standards including those for wired and wireless communications are then assessed. Finally, the authors consider the standards and on-going work and efforts for interoperability and integration between different standards and networks including the latest joint research effort between the world's two largest economies, US and China. A fully comprehensive introduction to smart grid standards and their applications for developers, consumers, and service providers. Covers all up-to-date standards of smart grid including the key standards from NIST, IEC, ISO, ZigBee, IEEE, HomePlug, SAE, and other international and regional standardization organizations. The Appendix summarizes all of the standards mentioned in the book. Presents standards for renewable energy and smart generation covering wind energy, solar, voltaic fuel cells, pumped storage, distributed generation, and nuclear generation standards. Standards for other alternative sources of energy such as geothermal energy and bioenergy are briefly introduced. Introduces the standards for smart storage and plug-in electric vehicles including standards for distributed energy resources, DER, electric storage, and E-mobility plug-in vehicles. The book is written in an accessible style, ideal as an introduction to the topic, yet contains sufficient detail and research to appeal to the more advanced and specialist reader.

Smart Data James A. George, James A. Rodger, 2010-03-25 The authors advocate attention to smart data strategy as an organizing element of enterprise performance optimization They believe that smart data as a corporate priority could revolutionize government or commercial enterprise performance much like six sigma or total quality as organizing paradigms have done in the past This revolution has not yet taken place because data historically resides in the province of the information resources organization Solutions that render data smart are articulated in technoid terms versus the language of the board room While books such as Adaptive Information by Pollock and Hodgson ably describe the current state of the art their necessarily technical tone is not conducive to corporate or agency wide qualitative change
