Making Technology Work John M. Deutch, Richard K. Lester, 2004 This book presents fifteen cases of technology applications in the energy and environment sectors including solar wind fuel cell nuclear coal combustion and emission control technologies The case studies demonstrate the importance of an interdisciplinary approach integrating technical and non technical aspects of the problem They also introduce a toolbox of analytical techniques useful in the context of realistic technology application These techniques include energy and mass balances project financial analysis tools treatment of external costs and benefits probabilistic risk assessment learning curves regression analysis and life cycle costing Each case study presents a description of the relevant technology at a level accessible to anyone familiar with elementary concepts in basic science and engineering The book is addressed to upper level undergraduate students in the natural sciences engineering and the social sciences who are interested in learning about problems of technology application as well as technology practitioners in industry and government

Microgrids

Design and Operation Ibrahim Anwar Ibrahim, Mohammadreza Shafiee, Afaq Hussain, Farid Moazzen, 2025-05-24 This book delves into the evolving landscape of microgrids offering a comprehensive guide on their design operation and integration within modern electrical networks The subject of this book is microgrids which are pivotal in the transition toward decentralised decarbonised and digitalised energy systems The book is structured around several practical use cases detailing the methods and results that will be of particular interest to readers such as optimisation of power flow integration of distributed energy resources DERs and advanced energy management systems It features an array of illustrations tables and diagrams that enhance the reader's understanding of complex concepts along with a didactic approach that includes step by step guides and case studies of 30 microgrid projects from around the world Readers will benefit from detailed insights into the economic technical and social aspects of microgrids including their role in enhancing grid resilience improving energy efficiency and supporting renewable integration The book also addresses the latest technological advancements such as digital twins and machine learning applications that are shaping the future of microgrid design and operation It serves as a practical manual providing frameworks and methodologies that can be applied in real world scenarios to optimise microgrid performance The unique combination of theoretical knowledge and practical experience makes this book a valuable resource for researchers engineers policymakers and practitioners in the energy sector Solar Energy

Technology Handbook E. W. Dickinson, 2018-05-04 The handbook for convenient use is divided into eight main units 1 The Solar Resource 2 Solar Thermal Collectors 3 Photovoltaics 4 Bioconversion 5 Wind Energy 6 Solar Energy Storage Systems 7 Applications of Solar Energy 8 Non technical Issues In addition there are three Appendixes containing unit conversion tables and useful solar data It became obvious early in this project that if proper coverage were to be given each of these areas it would be necessary to divide the handbook into two volumes The first six units constitute Part A Engineering Fundamentals and the last two units constitute Part B Applications Systems Design and Economics These volumes have been prepared primarily as reference books but it is felt that many of the sections will prove useful for practicing engineers scientists and students *New Technologies for Energy Efficiency* Michael Frank Hordeski, 2021-01-07 First published in 2002 This book examines the full scope of technologies available to address the electricity supply crisis The author details the tools and technologies available for incorporating smaller cleaner more efficient energy into energy management plans He examines the role of new technologies in reducing operating costs and developing more innovative and practical approaches to energy management Topics include implementation of alternative energy programs management of power quality cost effective power generation solutions cost effective energy services information monitoring and diagnostic systems energy storage options integration of lighting and cooling systems and more Integrated Regional Resources Management Linda B.
