safeguard intellectual property maintain a competitive edge and foster innovation within Industry 5.0 ecosystems. Communication devices and networks in Industry 5.0 transmit vast amounts of sensitive data including production data, supply chain information and operational metrics. Ensuring the integrity and confidentiality of this data is crucial for informed decision making and maintaining a competitive advantage. Security breaches could lead to data manipulation, unauthorized access and exposure of sensitive information, jeopardizing the trust of stakeholders and partners. Industry 5.0 involves interconnected supply chains where multiple entities collaborate and share data. Weaknesses in communication devices and networks can be exploited to compromise the integrity of the entire supply chain, impacting product quality and safety. Securing communication channels and computing models is vital for maintaining the trustworthiness of the supply chain, ensuring product quality and minimizing the risk of counterfeit components. In summary, addressing security issues in communication devices, networks and computing models is fundamental to the successful implementation of Industry 5.0. It not only protects the assets and operations of organizations but also contributes to the overall safety, reliability and sustainability of advanced industrial systems.
