Introduction

- Explains why the topic of the research is important
- Summarises theories and past work that are relevant to the present study
- Motivates the present study by justifying present hypotheses

How do we explain why a topic of research is important?

1. Orient the reader towards the general topic of interest
2. Focus attention on ways in which the topic impacts society, generating opportunities or problems
3. Situate the topic with respect to its multidisciplinary research context

The rise of sophisticated technology has altered our daily lives considerably ([Bonnafon, Shariff, & Rahwan, 2016](#)) and has begun affecting employment. Automation has already spurred job losses across industries and threatens to replace the jobs of millions in the coming years ([Amitz, Gregory, & Zierahn, 2017](#); [Frey & Osborne, 2017](#)). Given its economic effects, automation will be a key political issue in forthcoming years.

How do we summarize past work that is relevant to the present study?

1. Review key findings, noting IVs & DVs & how they were extracted
2. Avoid extraneous details. While study design is often crucial, key aspects should be noted
3. Sometimes a brief overview is enough
4. Signpost connections between past work and present research objectives

Beyond its economic effects, automation has several downstream social and psychological consequences, including, as we suggest here, shaping attitudes toward immigration. Recent studies have linked exposure to automation to support for political candidates and parties associated with restrictive immigration positions in the United States ([Frey, Berger, & Chen, 2018](#)) as well as in Europe ([Anelli, Colantone, & Stanig, 2019](#); [Dal Bò, Finan, Folke, Persson, & Rickne, 2018](#); [Zhen & Mayer, 2017](#)). In this article, we directly examine the relationship between concerns about automation and attitudes toward immigrants.

Writing A Scientific Research Report:

Designing and Writing Scientific Research Papers Thomas Annesley, American Association for Clinical Chemistry Staff, 2014-07 **Writing Scientific Research Articles** Margaret Cargill, Patrick D. T. O'Connor, 2011-09-13 Margaret Cargill's background as a linguist and research communications educator and Patrick O'Connor's experience as both research scientist and educator synergize to improve both the science and art of scientific writing. If the authors' goal is to give scientists the tools to write and publish compelling well-documented clear narratives that convey their work honestly and in proper context, they have succeeded admirably. *Veterinary Pathology* July 2009 The book is clearly written, has a logical step-by-step structure, is easy to read, and contains a lot of sensible advice about how to get scientific work published in international journals. The book is a most useful addition to the literature covering scientific writing. *Aquaculture International* April 2009 **Writing Scientific Research Articles: Strategy and Steps** guides authors in how to write as well as what to write to improve their chances of having their articles accepted for publication in international peer-reviewed journals. The book is designed for scientists who use English as a first or an additional language for research students and those who teach them paper writing skills and for early career researchers wanting to hone their skills as authors and mentors. It provides clear processes for selecting target journals and writing each section of a manuscript, starting with the results. The stepwise learning process uses practical exercises to develop writing and data presentation skills through analysis of well-written example papers. Strategies are presented for responding to referee comments as well as ideas for developing discipline-specific English language skills for manuscript writing. The book is designed for use by individuals or in a class setting. Visit the companion site at www.writeresearch.com.au for more information. **Writing and Presenting Scientific Papers** Birgitta Malmfors, Phil Garnsworthy, Michael Grossman, 2003-01-01 This dynamic manual provides guidelines for written and oral scientific presentations, including how to effectively prepare and deliver papers and presentations, how to find reliable research, and how to write research proposals. *How to Write and Publish a Scientific Paper* Robert A. Day, Barbara Gastel, 2006 This thoroughly revised edition of a classic handbook is the essential guide every scientist needs to achieve success in today's competitive environment. It gives beginning scientists and experienced researchers alike practical advice on writing about their work and publishing what they write. [Writing Business Research Reports](#) Matthew Rehart, 2021-05-13 A useful handbook, this text presents guidelines frequently followed by writers of reports of empirical research designed for publication in scientific business journals. The guidelines describe the types of information that should be included, how this information should be expressed, and where various types of information should be placed within a report. Excerpts from journal articles are used to illustrate most of the guidelines. At the end of each chapter, there are questions for classroom discussion. **How to Write and Publish a Scientific Paper** Robert A. Day, Barbara Gastel, 2006-04-26 Guide on writing and submitting a scientific paper for graduates to professionals. *Scientific Research*
