Towards Competent Workforce Bob Mansfield:

Towards a Competent Workforce Bob Mansfield, Lindsay Mitchell, 1996 For over a decade the UK has been engaged in a radical reform of its vocational education and training This book contains the first comprehensive description of Functional Analysis the method developed to define occupational standards and National Vocational Qualifications It also discusses changes in contemporary work patterns arguing that a new model of occupational competence is needed the Job Competence Model The text is in four parts covering strategy models and methodologies and how to apply them in practice Both authors have both been closely associated with the methods and models described in the book and their personal insights add enormously to the value of the material *The Wisdom of Strategic Learning* Ian Cunningham, 1999 Change means learning

There is no possibility for organizations to change unless the people in them learn In this new book Ian Cunningham writes about his pioneering work in developing strategic learning He shows the need to go beyond vague prescriptions for learning organizations Instead he advocates the value of a learning business which integrates learning with the strategic direction of the organization He elaborates practical examples of implementing strategic learning using self managed learning For the organization self managed learning has a strategic advantage in creating a focused active and committed team Ian Cunningham s powerful tried and tested approach is backed by evaluation research evidence and by its success in organizations such as Shell in the Netherlands the Hiram Walker Group in the UK and Valmet in Finland

Profiting from Multiple Intelligences in the Workplace Joyce Martin, 2001 Turns Howard Gardner s revolutionary theory of multiple intelligences into user friendly tools for understanding and assessing success in everyone from CEOs to cleaners It provides a complete system for the examination of staff needs matching applicants and job specifications successful interviewing and induction effective supervision focused training and development **New Approaches to Vocational Education in**

Europe Regina H. Mulder, Peter F.E. Sloane, 2004-05-10 This book investigates issues surrounding the concept of complex learning teaching environments The first part provides an overview of general themes connected to complex learning teaching environments and sheds some light on the theoretical background of the concept The second part demonstrates how the idea of complex learning teaching environments influences the particular training contexts in different countries

Modularisation of Vocational Education in Europe Hubert Ertl, 2000-01-01 This book examines modularisation in the German system of initial vocational education and training an issue that is a matter of intense debate by educationists and politicians in Germany After examining the underlying concept of modularisation Hubert Ertl looks at approaches to it in Spain Scotland France and the Netherlands before examining in detail the National Vocational Qualification NVQ framework in England and Wales The author demonstrates how the strengths and weaknesses of NVQs and their functional position within the education and training system are particularly significant to the strategy of modularisation in German initial training that he goes on to propose This strategy recommends the evolutionary development of the elements of occupational

profiles into self contained modules and identifies the ways in which these elements have to be transformed in order to fulfil the functions of modules in a modularised training system The author hopes that the restructured system may incorporate modules developed in co operation with European partners and so link to other national training systems

The Role of Vocational Education and Training in Promoting Lifelong Learning in Germany and England Alexandra Dehmel, 2005-05-16 Following the Introduction the emergence of lifelong learning as the central strategy in the EU s education and training policy is described in Chapter Two Illustrated in a historical and international context it reveals where the idea of lifelong learning has come from and how it has developed up to the present day A particular focus is on EU policy after the mid 1990s as well as on the EU s concept of lifelong learning and its objectives Since lifelong learning is a complex concept the provision of a broad perspective on VET in Germany and England seems inevitable in order to examine how VET fosters lifelong learning Therefore Dei inger s concept of qualification styles which explicitly aims at providing a multidimensional approach that reveals the complexities and singularities of VET systems serves as the basis of Chapter Three to describe the main patterns of VET in Germany and England The focus lies on initial training though the whole system is taken into account Chapter Four explicitly builds on Chapter Three It examines the role of VET in promoting lifelong learning in Germany and England The six Key Messages of the EU s Memorandum on Lifelong Learning serve as the analytical framework for the investigation Chapter Five summarises the findings and draws conclusions It reveals that the approaches for promoting lifelong learning as well as the perceptions of lifelong learning differ These findings are embedded in the wider context of EU education and training policy The EU policy on lifelong learning is regarded critically and attention is drawn to further research questions Appendices provide additional information to illustrate specific aspects of some of the issues in the main text in greater detail
