Multiple Approaches to Intelligent Systems Ibrahim F. Imam, Yves Kodratoff, Ayman El-Dessouki, Moonis Ali, 2004-05-19 We never create anything. We discover and reproduce. The Twelfth International Conference on Industrial and Engineering Applications of Artificial Intelligence and Expert Systems has a distinguished theme. It is concerned with bridging the gap between the academic and the industrial worlds of Artificial Intelligence (AI) and Expert Systems. The academic world is mainly concerned with discovering new algorithms, approaches, and methodologies; however, the industrial world is mainly driven by profits and concerned with producing new products or solving customers' problems. Ten years ago, the artificial intelligence research gap between academia and industry was very broad. Recently, this gap has been narrowed by the emergence of new fields and new joint research strategies in academia. Among the new fields which contributed to the academic-industrial convergence are knowledge representation, machine learning, searching, reasoning, distributed AI, neural networks, data mining, intelligent agents, robotics, pattern recognition, vision, applications of expert systems, and others. It is worth noting that the end results of research in these fields are usually products rather than empirical analyses and theoretical proofs. Applications of such technologies have found great success in many domains, including fraud detection, internet service, banking, credit risk, and assessment, telecommunication, etc. Progress in these areas has encouraged the leading corporations to institute research.

Transplant Production in the 21st Century Chieri Kubota, Changhoo Chun, 2013-11-11 We are facing global issues concerning environmental pollution and shortages of food feed phytomass plant biomass and natural resources which will become more serious in the forthcoming decades To solve these issues immeasurable numbers of various plants and huge amounts of phytomass are required every year for food feed and for the improvement of amenities the environment and our quality of life Increased phytomass is also required as alternative raw material for producing bio energy biodegradable plastics and many other plant originated industrial products Only by using phytomass as a reproducible energy source and raw material instead of fossil fuels and atomic power we can save natural resources and minimize environmental pollution To increase phytomass globally we need billions of quality transplants small plants to be grown yearly in the field or in the greenhouse under various environmental conditions However these high quality transplants can be produced only under carefully controlled rather than variable environment al conditions Recent research has shown that the closed transplant

production system requires considerably small amounts of electricity water fertilizer CO and pesticide to produce value added transplants as scheduled with minimum release of environmental pollutants and minimum loss of transplants The closed or closed type transplant production system is defined as a transplant production system covered with opaque walls with minimized or controlled ventilation rates using artificial lighting With this system photoperiod light intensity and quality air temperature humidity CO concentration and air current speed can be controlled as desired **Subject Guide to Books in Print** ,2001
