Microprocessor 3 Philippe Darche, 2020-11-03 Calculation is the main function of a computer The central unit is responsible for executing the programs The microprocessor is its integrated form This component since the announcement of its marketing in 1971 has not stopped breaking records in terms of computing power price reduction and integration of functions calculation of basic functions storage with integrated controllers It is present today in most electronic devices Knowing its internal mechanisms and programming is essential for the electronics engineer and computer scientist to understand and master the operation of a computer and advanced concepts of programming This first volume focuses more particularly on the first generations of microprocessors that is to say those that handle integers in 4 and 8 bit formats The first chapter presents the calculation function and reminds the memory function The following is devoted to notions of calculation model and architecture The concept of bus is then presented Chapters 4 and 5 can then address the internal organization and operation of the microprocessor first in hardware and then software The mechanism of the function call conventional and interrupted is more particularly detailed in a separate chapter The book ends with a presentation of architectures of the first microcomputers for a historical perspective The knowledge is presented in the most exhaustive way possible with examples drawn from current and old technologies that illustrate and make accessible the theoretical concepts Each chapter ends if necessary with corrected exercises and a bibliography The list of acronyms used and an index are at the end of the book

Computer Architecture John L. Hennessy, David A. Patterson, 2017-11-23 Computer Architecture A Quantitative Approach Sixth Edition has been considered essential reading by instructors students and practitioners of computer design for over 20 years The sixth edition of this classic textbook from Hennessy and Patterson winners of the 2017 ACM A M Turing Award recognizing contributions of lasting and major

technical importance to the computing field is fully revised with the latest developments in processor and system architecture. The text now features examples from the RISC V RISC Five instruction set architecture, a modern RISC instruction set developed and designed to be a free and openly adoptable standard. It also includes a new chapter on domain specific architectures and an updated chapter on warehouse scale computing that features the first public information on Google's newest WSC. True to its original mission of demystifying computer architecture, this edition continues the longstanding tradition of focusing on areas where the most exciting computing innovation is happening while always keeping an emphasis on good engineering design. Winner of a 2019 Textbook Excellence Award (Texty) from the Textbook and Academic Authors Association. Includes a new chapter on domain specific architectures explaining how they are the only path forward for improved performance and energy efficiency given the end of Moore's Law and Dennard scaling. Features the first publication of several DSAs from industry. Features extensive updates to the chapter on warehouse scale computing with the first public information on the newest Google WSC. Offers updates to other chapters including new material dealing with the use of stacked DRAM, data on the performance of new NVIDIA Pascal GPU vs new AVX 512 Intel Skylake CPU and extensive additions to content covering multicore architecture and organization. Includes Putting It All Together sections near the end of every chapter providing real world technology examples that demonstrate the principles covered in each chapter. Includes review appendices in the printed text and additional reference appendices available online. Includes updated and improved case studies and exercises. ACM named John L. Hennessy and David A. Patterson recipients of the 2017 ACM A.M. Turing Award for pioneering a systematic quantitative approach to the design and evaluation of computer architectures with enduring impact on the microprocessor industry.
