

Dedication to small details leads to a comparatively lightweight body

Despite its larger dimensions, the new Pajero has a relatively light specific gravity. The weight reduction measures combine with the powerful engines and better aerodynamics to improve both acceleration and fuel economy.

Keeping the weight down may seem simple, but we did not want to achieve it at the expense of structural integrity.

A chassis designer explains the challenges: "We had no choice but to examine each and every component that had any weight reduction potential. There is no one method of significantly improving fuel economy."

The suspensions' lower arms use a closed section design to reduce weight and increase durability.

Other weight reduction measures include lightening the engine as much

as possible, adopting a lighter steering system, aluminum differential covers, and lighter brake calipers, and extensively using high-tensile steel and resin components.

Centre of gravity lowered by 50 mm for improved athleticism

Rather than suppress body roll with extremely rigid stabilisers, we lowered the centre of gravity for a flat ride, high-speed cornering stability, and excellent off-road performance.

A product engineer explains the efforts to lower the centre of gravity: "To lower the engine, we had to shift the front differential outwards. Through extensive trial and error, we determined the front differential's thickness and material, the shape of the engine's oil pan, and such. Indeed, it was often a matter of millimeters."

The new monocoque body, new suspensions, wider tracks, lower overall height, redesigned underfloor layout, and engine design all contribute.

In the end, we were able to lower the centre of gravity by 50 mm, while actually raising the ground clearance. The result is outstanding handling and cornering performance.

New rack-and-pinion steering improves on-road response

The new rack-and-pinion steering system with a variable gear ratio delivers more responsive on-road handling than the previous ball-and-nut system. It also makes U-turns much easier.

Though the lock-to-lock distance remains the same, the steering speed is higher. As a result, the wheels turn more with the same steering effort.

A rack as thick as trucks' helps provide the durability needed for aggressive off-roading. And in a first for Mitsubishi, a one-way hydraulic valve isolates kickback on rough roads.

Improved off-road performance

Despite striving for higher levels of sophistication, we still considered the Pajero's off-road performance and durability to be very high priorities.

A chassis designer explained, "There are Pajero users who rely on 4WD in their daily lives. The Pajero concept is not about managing to get somewhere because you felt adventurous. Rather, it is about always getting to your destination."

The new Pajero can conquer territories once considered unreachable, thanks to the new engines, new independent suspensions, and lower centre of gravity.

Despite its lower floor height, the new Pajero has higher ground clearance. The transmissions and fuel tank are as flat as possible. The fuel tank features an internal reservoir cap that allows the Pajero to climb steep hills when fuel is running low.

The new Pajero can ford streams up to 600 mm deep at approximately 5 km/h. New wading measures for the diesel models include a front air-intake system, which replaces the previous bumper-through air intake. The new system reduces emissions and increases torque. Its cyclone-type air-cleaner uses a propeller that generates a vortex through which air can flow, but which greatly reduces dust and water. Other wading measures include locating the air-conditioner's electrical components and the differential's breather intakes more than 600 mm above ground.

All-terrain mastery

While the all-new Pajero offers the suppositional comfort of a prestigious saloon, its true strength is its mastery of virtually any terrain.

The vehicle was kept as light as possible, and the centre of gravity was lowered, while components and systems were selected and tuned to provide superior all-round performance.

Off road, the new Pajero continues to demonstrate the rugged prowess that dominates rallies worldwide. On road, the new Pajero is well-mannered, offering supple ride comfort and smooth response. Strength with grace—the substance of excellence.
